

ELISENCE

Human-Centred Connected Health Ecosystem

Prevention • Continuity • Trusted Health Intelligence

Sam Asi
Founder & CEO
Web Summit Lisbon 2026

Healthcare Feels Fragmented

Fragmentation, rising costs, and growing pressure across people, systems, and public health.

Healthcare today often feels fragmented, reactive, expensive, and difficult to navigate — not only for people, but also for healthcare systems, governments, insurers, and public health organisations.

FOR PEOPLE

- Health journeys are scattered across disconnected apps, appointments, medication, GP and doctor communication, medical tracking, women's health, diabetes and metabolic care, wellbeing, pharmacy journeys, and everyday health decisions.
- People and families are increasingly expected to manage prevention, chronic conditions, medication continuity, family care, health information, and trusted guidance across multiple tools with little continuity.
- Healthcare can feel confusing, stressful, isolating, expensive, and difficult to coordinate over time.

FOR HEALTHCARE SYSTEMS

- Healthcare systems face rising chronic disease, ageing populations, workforce strain, fragmented care journeys, operational pressure, and growing healthcare cost.
- Hospitals, clinics, healthcare professionals, and care providers need better continuity, trusted communication, earlier intervention, and long-term engagement.
- Better prevention, prediction, communication, and connected health participation may help reduce avoidable burden, inefficiency, duplication, and pressure on healthcare systems over time.

FOR GOVERNMENTS & PUBLIC HEALTH

- Governments, ministries of health, insurers, and public health organisations face rising demand, prevention gaps, chronic disease growth, and increasing cost pressure.
- Public health strategies need scalable digital participation, trusted health engagement, population-level prevention, and more connected long-term health journeys.
- The challenge is not only building another app; it is creating trusted infrastructure that helps people and systems stay connected before, during, and after illness.

Healthcare should feel more connected, understandable, preventative, continuous, and human.

Why Now

Healthcare is reaching a turning point.

01 HEALTHCARE PRESSURE

- Chronic disease, ageing populations, workforce strain, rising costs, and public health pressure are pushing healthcare systems toward prevention, continuity, earlier intervention, and more connected care.

02 PEOPLE ARE MANAGING MORE HEALTH

- People are increasingly expected to manage medication, diabetes, prevention, chronic conditions, appointments, wellbeing, family care, weight and metabolic journeys, and everyday health decisions themselves — but the experience still feels fragmented.

03 DIGITAL EXPECTATIONS HAVE CHANGED

- People now expect simple, connected, intelligent experiences in every part of life, while healthcare still often feels fragmented, disconnected, and difficult to navigate across people, providers, insurers, and systems.

04 TECHNOLOGY IS FINALLY MATURE ENOUGH

- Healthcare AI, medical intelligence, secure identity, trusted communication, Zero Trust access, and region-aware digital health infrastructure are now mature enough to support safer long-term continuity.

THIS IS THE SHIFT ELISENCE IS BUILT FOR

Reactive → **Preventative**

Episodic → **Continuous**

Fragmented → **Connected**

Isolated tools → **Trusted health ecosystems**

We believe Elisence is arriving at the moment healthcare pressure, AI maturity, digital health infrastructure, trust expectations, and GCC healthcare transformation are **finally converging**.

UAE • Saudi Arabia • Qatar • GCC digital health transformation

WHAT IS ELISENCE? → One connected health ecosystem for people, providers, and healthcare systems.

FOR PEOPLE

- One connected place for prevention, medication, metabolic health, women's health, GP communication, wellbeing, and family care.
- Reduces fragmented tools and helps people make better everyday health decisions.
- Simplifies health journeys across care, pharmacy, and lifestyle.

FOR HEALTHCARE SYSTEMS

- Supports continuity, prevention, communication, participation, prediction, and connected care across providers and institutions.
- Helps move care beyond fragmented snapshots toward trusted long-term understanding.
- Improves outcomes, reduces cost, and strengthens care quality.

FOR GOVERNMENTS & PUBLIC HEALTH

- Supports population health, prevention, public participation, and stronger health system engagement.
- Built to adapt across NHS, FDA, MDR, GCC, and local healthcare frameworks.
- Enables data-driven policy, early action, and better public health outcomes.

One ecosystem. One intelligence layer. Better health for all.

06

PRODUCT ECOSYSTEM

Connected Health Experiences

From everyday life to prevention, intelligence, and better outcomes for everyone.

ELISENCE IS PREVENTION-FIRST

We help people stay healthier for longer, reduce complications, and support healthier communities.

EVERYDAY LIFE INPUTS

Real life. Real time. Real understanding.

- Food Intelligence**
What you eat and how it affects you
- Water Intelligence**
Hydration, quality, timing, habits
- Activity & Lifestyle**
Steps, movement, exercise, sleep
- Weight & Body Metrics**
Weight, body composition, progress
- Medication & Adherence**
Medications, reminders, continuity
- Environment & Weather**
Temperature, humidity, air quality
- Vital Signs & Symptoms**
Heart rate, BP, glucose, mood, etc.
- Mental & Emotional Wellbeing**
Stress, mood, energy, balance

SOCIAL HEALTH NETWORK

You don't manage health alone.

- Family**
Care, support, updates
- Friends**
Encouragement, activities
- Caregivers**
Daily help, monitoring
- Healthcare Professionals**
GPs, doctors, specialists
- Pharmacies**
Medication support, safety
- Communities**
Groups, challenges, support
- Workplace & Schools**
Wellbeing programs
- Voice, Video, Text**
Trusted communication

HEALTH INTELLIGENCE ENGINES

Independent engines. Smarter together.

- Metabolic & Diabetes Engine**
Risk analysis, trends, early detection
- Nutrition Engine**
Food quality, nutrition balance
- Activity Engine**
Movement, fitness, daily energy
- Water & Hydration Engine**
Hydration patterns & impact
- Medication Intelligence Engine**
Adherence, safety, interactions
- Women's Health Intelligence Engine**
Cycles, hormones, fertility, pregnancy, menopause, and long-term wellbeing
- Sleep & Recovery Engine**
Sleep quality, recovery, stress
- Environmental & Weather Engine**
Air quality, pollen, temperature impact

ELISA

Trusted Continuity Companion

ELISA

Your Trusted Continuity Companion

- Understands You**
Learns your patterns
- Guides You**
Personalized suggestions
- Reminds You**
Medications, habits, follow-ups
- Supports You**
People, care, and services
- Protects You**
Privacy-first, always

HEALTHCARE ECOSYSTEM

Care when you need it. Connected when it matters.

- GP / Doctors**
Consultations & follow-up
- Pharmacies**
Medications, refills, safety
- Clinics & Hospitals**
Care, tests, treatments
- Labs & Diagnostics**
Tests, results, tracking
- Specialists**
Expert care & opinions
- Emergency Services**
Urgent help when needed
- Public Health Programs**
Vaccination, screening, awareness
- Researchers & Universities**
Research & innovation

BETTER OUTCOMES

For people, systems & societies.

- Healthier People**
Better daily choices, better long-term health
- Fewer Complications**
Early detection and better management
- Lower Healthcare Costs**
Fewer avoidable visits and hospitalizations
- Better Continuity**
No more fragmented health journeys
- Higher Engagement**
People more active in their own health
- Stronger Communities**
Healthier families, healthier societies

HOW ELISENCE HELPS PREVENT DISEASE

Early awareness. Early action. Better tomorrow.

REDUCING PRESSURE ON HEALTHCARE SYSTEMS

Shifting from treatment to prevention and proactive care.

DIABETES: A MAJOR CHALLENGE IN THE ARAB WORLD

Elisence brings all engines together to tackle the diabetes crisis.

WOMEN'S HEALTH: POWERED BY THE WHOLE ECOSYSTEM

Every engine supports every stage of a woman's health journey.

Puberty • Menstruation • Fertility • Pregnancy • Postpartum • Perimenopause • Menopause • Beyond

ARCHITECTURE STRENGTH: INDEPENDENT BY DESIGN

Each engine and core is independent. No single point of failure.

If one engine is down, others continue to work seamlessly.
100% Independence
Zero Impact

POPULATION HEALTH INTELLIGENCE FOR GOVERNMENTS

From individual data to population understanding.

INSURERS VALUE

Better data. Better understanding. Better decisions.

WHY IT MATTERS

Elisence connects everyday life, social support, health intelligence, and healthcare ecosystems to help people live healthier, prevent disease, reduce pressure on healthcare systems, and create a healthier future for all.

BUILT FOR THE FUTURE

Elisence is not just a platform. It's a movement towards prevention, continuity, and a healthier world.

ELISENCE
Connected Health. Healthier Future.

How Elisence Helps People Stay Healthier

Continuity, prevention, and better long-term outcomes — for people, not disconnected tools.

PREVENTION & EARLY AWARENESS

Elisence is designed to help people identify risks earlier and support healthier decisions before complications develop.

Food intelligence, water intelligence, activity understanding, sleep awareness, medication continuity, body understanding, environmental awareness, and pattern recognition work together to help users better understand their health over time.

The goal is to support prevention rather than waiting for illness.

DIABETES & METABOLIC HEALTH

Diabetes is one of the biggest health challenges across many regions, including GCC countries.

Elisence combines nutrition understanding, hydration, activity, medication continuity, body metrics, weight tracking, and metabolic intelligence to support healthier routines, earlier awareness, and better long-term outcomes.

The focus is continuity and understanding rather than isolated tracking tools.

WOMEN'S HEALTH INTELLIGENCE

Women's Health is supported through the wider Elisence ecosystem.

Nutrition, medication continuity, activity, sleep, body metrics, emotional wellbeing, social support, and health intelligence work together across different life stages including puberty, fertility, pregnancy, postpartum, menopause, and long-term wellbeing.

The goal is a connected experience rather than fragmented tools.

SOCIAL HEALTH NETWORK

Health is not only medical.

Family members, friends, caregivers, communities, clinicians, and trusted professionals can become part of a connected support network.

Voice communication, video communication, text messaging, health participation, and continuity tools help people stay supported, connected, and engaged over time.

HEALTHCARE CONTINUITY & PARTICIPATION

Most health applications lose continuity between people and healthcare providers.

Elisence is designed to help maintain trusted long-term connections between people, families, caregivers, clinicians, pharmacies, and healthcare organisations.

Rather than only appearing during illness, healthcare can remain connected to the person's ongoing health journey.

This helps support continuity, participation, and better long-term understanding.

ELISA CONTINUITY COMPANION

At the centre of the experience is Elisa.

Elisa is designed as a trusted continuity companion that helps people stay engaged with healthier routines, reminders, continuity support, participation, and long-term health journeys.

Elisa is intentionally non-diagnostic and designed to support understanding, continuity, and healthier engagement.

EVERYDAY HEALTH INTELLIGENCE

Elisence combines everyday life experiences with health understanding.

Food, hydration, activity, sleep, medication, body metrics, environmental awareness, social participation, and longitudinal understanding work together to help people better understand patterns, habits, and health behaviours over time.

The objective is to create better awareness, stronger continuity, and healthier long-term outcomes.

One connected ecosystem helping people stay healthier through prevention, continuity, participation, trusted health intelligence, and stronger long-term relationships with their support networks and healthcare providers.

Value for Systems, Governments & Insurers

Prevention, continuity, population understanding, and stronger long-term health outcomes — for healthcare systems, not disconnected tools.

REDUCING PRESSURE ON HEALTHCARE SYSTEMS

Elisence is designed to support earlier awareness, better self-management, stronger continuity, and healthier long-term participation.

By helping people understand health earlier and stay engaged over time, healthcare systems may experience fewer avoidable complications, better continuity of care, and more informed patient participation.

The objective is not replacing healthcare.

The objective is helping healthcare work more effectively.

POPULATION HEALTH INTELLIGENCE

Privacy-aware and governed population insights may help public health organisations better understand:

- health trends
- prevention opportunities
- regional risks
- long-term patterns
- participation levels

This may support planning, prioritisation, resource allocation, and public health strategy.

DIABETES CHALLENGE IN GCC COUNTRIES

Diabetes represents a major challenge across many GCC countries.

Elisence combines:

- Nutrition Intelligence
- Water Intelligence
- Activity Intelligence
- Medication Continuity
- Body Metrics
- Metabolic Intelligence

VALUE FOR INSURERS & HEALTH PLANS

Better understanding of health journeys may support:

- stronger prevention programs
- better engagement
- continuity of care
- healthier member participation
- more informed risk understanding

The focus is long-term population health rather than isolated events.

VALUE FOR HOSPITALS, CLINICS & PHARMACIES

Elisence is designed to support stronger continuity between people and healthcare organisations.

Communication, medication continuity, health participation, tracking, and long-term engagement may help create more connected healthcare experiences.

Healthcare providers remain informed through ongoing participation rather than only episodic visits.

VALUE FOR UNIVERSITIES & RESEARCH

Governed and privacy-aware longitudinal understanding may help support:

- healthcare research
- behavioural research
- prevention research
- participation studies
- population health understanding

The goal is supporting evidence generation without compromising privacy or trust.

INDEPENDENT ENGINE ARCHITECTURE

Each Elisence intelligence engine is independently designed.

Examples include:

- Diabetes Engine
- Women's Health Engine
- Food Intelligence Engine
- Water Intelligence Engine
- Activity Engine
- Medication Intelligence Engine

GCC & COUNTRY ADAPTABILITY

Elisence is designed to adapt across healthcare systems, languages, cultures, and regulatory environments.

The platform is built with governance, privacy, healthcare-awareness, and GCC-aligned adaptability principles.

Country-specific implementation can evolve without requiring the entire platform architecture to change.

Helping people stay healthier. Helping healthcare systems become more connected. Supporting prevention, continuity, population understanding, and better long-term health outcomes.

Healthcare Systems, Hospitals & Insurers

How Elisence supports continuity, efficiency, engagement, and better long-term outcomes.

 **REDUCING PRESSURE ON HEALTHCARE SYSTEMS**

Healthcare systems face growing pressure from chronic disease burden, diabetes burden, rising healthcare demand, fragmented care pathways, and increasing medication complexity. Elisence is designed to help support prevention, continuity, participation, and long-term engagement — helping people stay healthier and more informed between appointments. By strengthening self-management and ongoing participation, healthcare systems may experience fewer avoidable complications, fewer avoidable visits, stronger continuity, more informed patients, and better long-term outcomes.

 **LONGITUDINAL HEALTH UNDERSTANDING**

Healthcare often relies on isolated snapshots — appointments, tests, episodic visits, and fragmented records captured at single points in time. Elisence supports understanding health over time through nutrition, hydration, activity, medication, symptoms, body metrics, and participation — helping build a clearer picture of health journeys rather than disconnected moments. Longitudinal understanding is valuable because it may support earlier awareness, better continuity, more informed clinical conversations, and stronger operational decision-making

 **CONTINUITY OF CARE**

Healthcare normally sees people during appointments — yet most health journeys happen between visits. Elisence helps maintain continuity between visits through tracking, medication continuity, participation, follow-up, communication, and social health support. Continuity matters because disconnected care increases confusion, missed follow-up, medication gaps, and reactive escalation — while ongoing connection supports safer, more informed, and more coordinated healthcare experiences over time.

 **VALUE FOR INSURERS & HEALTH PLANS**

Insurers and health plans may benefit operationally from stronger prevention participation, clearer continuity patterns, population understanding, sustained engagement, more informed risk awareness, and better long-term outcomes. Rather than focusing only on isolated claims events, Elisence is designed to support healthier member participation, continuity of care, and long-term population health understanding. Operational focus: healthier populations and stronger continuity — not disconnected transactional interactions.

 **MEDICATION ADHERENCE & SAFETY**

Medication continuity is operationally supported through medication reminders, refill awareness, adherence support, medication intelligence, pharmacy journeys, and safety awareness. For hospitals, clinics, pharmacies, and care networks, this helps reduce missed doses, support safer refill timing, strengthen pharmacy participation, and maintain clearer medication journeys across organisations. Operational value: better adherence, better safety, and better continuity across the care pathway.

 **PHARMACY & CARE NETWORK VALUE**

Pharmacies and care networks play a critical role in medication continuity, refill support, adherence awareness, communication pathways, pharmacy participation, and coordinated care journeys. Elisence is designed to help pharmacies remain connected to ongoing health journeys — supporting refill timing, adherence awareness, safer medication pathways, and clearer communication with people, families, and care teams. Operational value: stronger pharmacy participation, safer medication continuity, and more

 **BETTER HEALTHCARE ENGAGEMENT**

Elisence promotes healthy engagement — not addictive engagement designed around attention loops or advertising-driven behaviour. People stay connected through family support, social participation, trusted communities, care teams, and healthcare professionals — supporting healthier long-term participation rather than isolated app usage. For healthcare organisations, this operational model supports sustained engagement that strengthens continuity, participation, and healthier outcomes over time.

 **FROM REACTIVE CARE TO PROACTIVE HEALTH**

Traditional healthcare often reacts after problems occur — responding to illness, complications, escalation, and episodic demand. Elisence is designed to support earlier awareness, prevention, participation, continuity, and long-term engagement — helping healthcare organisations shift toward proactive health support rather than reactive intervention alone. This operational shift may help hospitals, clinics, insurers, pharmacies, and care networks support healthier populations, stronger continuity, and better long-term outcomes over time.

Helping healthcare systems deliver stronger continuity. Helping insurers support healthier populations. Helping pharmacies and care networks stay connected. Helping people achieve better long-term outcomes.

Trust Is Architecture

Built medical-aware, governed non-medical by default.

TRUST & SAFETY → GOVERNED HEALTH INTELLIGENCE → MEDICAL-READY FOUNDATIONS → ZERO TRUST & PRIVACY → FAIL SAFELY

 **TRUST & SAFETY BY DESIGN**

- Elisence is designed with healthcare-aware safety thinking from the beginning — prioritising trust, responsible boundaries, privacy, transparency, permission, and safer long-term participation.
- Citizen experiences are intentionally designed to remain non-clinical and non-diagnostic by default, helping people better understand and navigate healthcare rather than replacing doctors or acting as autonomous medical authority.

 **MEDICAL-READY FOUNDATIONS**

- Elisence is intentionally designed as a governed non-medical platform today — while supporting future clinically governed activation where appropriate, under licensed, institutionally supervised, or healthcare-system-led environments.
- Safety-aware infrastructure, governance foundations, auditability, permissions, and healthcare-aware controls are designed from the beginning, remaining intentionally constrained and fail-safe by default.

 **EXPLAINABLE & AUDITABLE INTELLIGENCE**

- Elisence is designed around explainable and accountable health understanding.
- Recommendations, insights, and guidance are intended to remain traceable, reviewable, and understandable rather than operating as opaque black-box decision making.
- The platform prioritizes explainability, governance, transparency, and accountability before automation.

 **HUMAN IN CONTROL**

- Operational objective: Trust through understanding rather than trust through blind automation.
- Elisence is designed to support people, clinicians, caregivers, and healthcare organisations rather than replace them.
- Healthcare professionals remain responsible for clinical judgement.
- Elisence is designed to support awareness, participation, continuity, communication, and understanding while keeping humans accountable for important decisions.

 **REGULATORY ALIGNMENT**

- Operational objective: Technology supports people. Technology does not replace people.
- Elisence is designed with awareness of:
 - NHS principles
 - EU GDPR expectations
 - FDA-informed safety thinking
 - UK GDPR expectations
 - MDR thinking
 - GCC healthcare realities
- The objective is supporting responsible deployment across different healthcare environments while respecting local governance requirements.

 **GOVERNED HEALTH INTELLIGENCE**

- Elisence is designed around trusted, governed, and curated health understanding rather than unrestricted medical AI generation.
- Health understanding is designed to align with healthcare-aware thinking inspired by NHS-style safety principles, UK and EU privacy expectations, FDA-informed boundaries, MDR thinking, and Gulf healthcare realities — while adapting responsibly to local healthcare context over time.

 **ZERO TRUST, PRIVACY & ACCOUNTABILITY**

- Responses are designed to operate within governed safety boundaries, uncertainty handling, trusted escalation pathways, and permission-aware experiences rather than unsafe certainty or unrestricted escalation pathways.
- Elisence follows a Zero-Trust philosophy — permissions, access, identity, consent, and visibility are validated rather than assumed.
- Privacy-aware, permissioned, explainable, and accountable participation are designed to support trust over time.

 **BUILT TO FAIL SAFELY**

- Safety matters more than false certainty.
- Elisence is designed to behave conservatively, explain uncertainty, restrict unsafe behaviour, and fail safely rather than overclaim confidence.

 **TRUST AS INFRASTRUCTURE**

- Many digital platforms add trust, governance, privacy, and accountability later.
- Elisence is designed with trust as foundational infrastructure from the beginning.
- Identity, permissions, consent, privacy, governance, auditability, and accountability are intended to operate as core platform capabilities rather than optional features.
- Operational objective: Trust is architecture. Not an afterthought.

 **RESPONSIBLE AI ACTIVATION**

- Future intelligent capabilities are intended to remain governance-aware and permission-aware.
- Higher levels of intelligence may be activated under appropriate organisational, institutional, healthcare-system, or regulatory controls when required.
- The objective is responsible activation rather than unrestricted automation.

Trust is not paperwork. Trust is architecture.

Business Model

Trust-led healthcare value creation.

FOR PEOPLE (B2C)

- Elisence is designed to create meaningful everyday value through prevention, continuity, trusted health participation, medication support, metabolic and wellbeing journeys, health understanding, social health participation, and more connected everyday healthcare experiences.
- Premium experiences may support advanced health understanding, continuity support, intelligent health participation, deeper personalisation, and more connected long-term health journeys — while preserving the philosophy that trust, safety, and essential participation should not feel locked behind payment.

FOR HEALTHCARE ORGANISATIONS (B2B / B2B2C)

- Elisence is designed to support clinics, hospitals, pharmacies, employers, insurers, healthcare providers, and responsible care organisations through continuity, participation, communication, prevention, trusted engagement, and more connected healthcare journeys.
- In some environments, organisations may enable, sponsor, or subsidise Elisence experiences for the people they support.

REVENUE STREAMS

- Elisence is designed around multiple value layers rather than a single revenue source.
- Potential revenue streams may include:
 - Premium subscriptions
 - Advanced intelligence services
 - Employer wellbeing programmes
 - Population health programmes
 - Institutional intelligence services
 - Family plans
 - Healthcare organisation licensing
 - Pharmacy participation services
 - Research collaboration
- The platform is designed to support diversified healthcare value creation over time.

HEALTHY ENGAGEMENT AS A MOAT

- Elisence is designed around healthy long-term participation rather than advertising-driven attention loops — helping continuity, trust, engagement, and meaningful everyday value reinforce one another over time.

LONG-TERM PLATFORM EXPANSION

- Elisence is designed across multiple healthcare domains including:
 - prevention
 - nutrition
 - hydration
 - activity
 - medication
 - social health
 - women's health
 - diabetes
 - continuity support
 - population health support
- Because value is created across multiple healthcare layers, the platform is designed to support long-term expansion rather than a single niche category.

FOR GOVERNMENTS & PUBLIC HEALTH SYSTEMS (B2G)

- Public health systems increasingly need prevention, participation, continuity, trusted engagement, healthier behaviours, and lower fragmentation across healthcare journeys.
- Elisence is designed to support more scalable, connected, and prevention-oriented healthcare participation rather than isolated interactions.

TRUST & CONTINUITY AS A MOAT

- Many health applications focus on isolated transactions or short-term engagement.
- Elisence is designed around:
 - continuity
 - trusted health journeys
 - social health support
 - participation
 - longitudinal understanding
 - healthcare ecosystem integration
- The objective is building long-term healthcare relationships rather than short-term usage.
- Trust, continuity, and participation reinforce one another over time.

PRIVACY-FIRST VALUE CREATION

- Elisence is not designed around selling personal health data.
- The platform is designed around:
 - trust
 - continuity
 - responsible intelligence
 - participation
 - healthcare value
- Personal health information remains privacy-aware, permission-aware, and governance-aware.
- The objective is long-term trust rather than short-term data monetisation.

MULTI-SIDED PLATFORM MODEL

- Elisence is designed to create value across multiple healthcare layers simultaneously:
 - People
 - Healthcare Professionals
 - Insurers
 - Families
 - Pharmacies
 - Public Health Systems
 - Caregivers
 - Healthcare Organisations
 - Research Communities
- This creates interconnected value rather than a single isolated user experience.

LONG-TERM PLATFORM VALUE

- Over time, Elisence may support responsible licensing, governed healthcare infrastructure, continuity tooling, workflow support, institutional partnerships, research collaboration, healthcare intelligence services, and trusted ecosystem participation.

One ecosystem. Multiple value layers. Trust before monetisation.

09 — MARKET & EXPANSION

Global Ambition, Local Execution

GLOBAL HEALTHCARE OPPORTUNITY

- Healthcare systems around the world face similar long-term challenges:
 - prevention pressure
 - continuity gaps
 - ageing populations
 - chronic disease growth
 - medication complexity
 - rising healthcare costs
- The need for stronger prevention, continuity, participation, and long-term health engagement exists across healthcare systems worldwide rather than in a single country or region.

MIDDLE EAST MOMENTUM

- The Gulf region represents one of the world's most ambitious healthcare transformation environments.
- Countries across the region continue investing in digital health, prevention, patient engagement, healthcare innovation, and future-ready healthcare infrastructure.
- Elisence is designed to support responsible localisation while respecting regional healthcare priorities.

UNITED KINGDOM FOUNDATION

- The United Kingdom provides an important validation environment because of:
 - trust requirements
 - healthcare standards
 - healthcare credibility
 - patient safety expectations
 - responsible deployment
- Building responsibly within mature healthcare environments helps strengthen long-term international readiness.

COUNTRY-AWARE EXPANSION

- Healthcare is never one-size-fits-all.
- Different countries operate with different:
 - healthcare systems
 - reimbursement models
 - cultures
 - regulations
 - languages
 - governance expectations
- Elisence is designed with multilingual, healthcare-aware, and country-adaptive foundations that

EUROPEAN EXPANSION

- Many European healthcare systems share growing demand for responsible expansion through:
 - partnerships
 - compliance
 - responsible scaling
 - localisation
 - healthcare participation
- The objective is healthcare-system awareness rather than rapid market replication.

INTERNATIONAL HEALTHCARE TRANSFORMATION MARKETS

- Healthcare transformation is taking place across many regions including:
 - Europe
 - Asia-Pacific
 - emerging healthcare innovation markets
 - GCC
 - North America
- The opportunity is global.
- The platform is designed to adapt responsibly to different healthcare environments over time.

REPEATABLE SCALE MODEL

- The goal is not to launch everywhere at once.
- The goal is to build a repeatable model where:
 - prevention
 - participation
 - healthcare-aware governance
 - can be implemented responsibly and scaled over time.
 - continuity
 - trusted engagement

LONG-TERM GLOBAL VISION

- The long-term objective is a connected healthcare ecosystem that supports:
 - people
 - caregivers
 - clinicians
 - insurers
 - families
 - pharmacies
 - healthcare organisations
 - public health systems

Why Elisence Exists

A founder story rooted in healthcare continuity

Inspired by my daughter,

ELISA

A hope for healthcare that feels more **trusted, connected, and human.**

Why Elisence exists.

Elisence began with a simple but deeply personal question:

Why does healthcare so often feel fragmented, stressful, confusing, and difficult to navigate — especially when people are already vulnerable?

Through my background across engineering, legal, business, and care services, including home and domiciliary care, I repeatedly saw the same pattern:

People are increasingly expected to manage medication, prevention, chronic conditions, appointments, wellbeing, family care, and everyday healthcare decisions across systems that rarely feel connected, human, or easy to navigate.

Over time, I became increasingly interested in whether better systems thinking, thoughtful design, trusted health intelligence, and more connected experiences could help healthcare feel calmer, safer, more supportive, and easier to understand.

Behind that question is something I kept seeing again and again — healthcare fragmentation, broken continuity, and the growing complexity of modern healthcare, with families and caregivers carrying much of the burden when people are left navigating systems that do not connect.

I came to care deeply about trusted health participation — not as a slogan, but as something people deserve when they are already vulnerable and doing their best to stay well.

I bring together an engineering background, legal training, business experience, and years close to care — including home and domiciliary care — shaped by healthcare systems thinking and long-term commitment rather than short-term ambition.

Elisence is also deeply personal to me.

It is inspired by and named after my daughter, **Elisa** — reflecting a long-term hope to help build a future where healthcare feels more connected, more trusted, more human, and easier to navigate for the people we care about.

For me, Elisence is not simply a company or a product.

It is a long-term mission to reduce fragmentation, strengthen continuity, and help healthcare feel more human, supportive, and connected over time.

Continuity matters because health is lived across years, not moments. Trust matters because people should not have to wonder whether the systems supporting them are safe, respectful, or aligned with their wellbeing.

Human-centred healthcare matters because dignity, clarity, and connection should not be optional. Connected healthcare experiences matter because fragmentation adds stress to situations that are already difficult enough.

For me, this is a multi-decade mission — not something built for a quick cycle, but something worth building carefully for the people we love and for the healthcare environments they depend on.

Elisence is intended to become a long-term healthcare participation platform helping people, families, caregivers, clinicians, pharmacies, healthcare organisations, insurers, and public health systems remain more connected over time.

ENGINEERING • CARE • SYSTEMS THINKING • HUMAN HEAL

A founder story rooted in healthcare continuity

A future where healthcare stays connected.

Connected, preventative, supportive, and continuously human.

VISION

Healthcare should not feel fragmented, reactive, and disconnected.

We believe people deserve healthcare experiences that remain connected throughout everyday life — not only during moments of illness.

The future of healthcare is not simply better treatment.

It is stronger prevention, trusted participation, meaningful continuity, and healthier long-term relationships between people, families, caregivers, clinicians, and healthcare systems.

A connected future is one where people remain supported before illness, during illness, and long after recovery.

Healthcare should feel calmer, more understandable, more human, and more continuous.

WHY ELISENCE

Elisence is designed as a long-term healthcare relationship ecosystem.

Rather than creating another isolated health application, Elisence is intended to connect prevention, continuity, wellbeing, medication support, family participation, social health engagement, trusted health intelligence, and everyday healthcare understanding.

At the centre is ELISA — a trusted continuity companion designed to help people remain connected to healthier routines, trusted participation, support networks, wellbeing journeys, and everyday healthcare decisions.

The objective is not more notifications.

The objective is stronger healthcare relationships.

THE AMBITION

Build responsibly. Earn trust locally. Scale globally.

We believe healthcare transformation should be achieved through trust, safety, governance, continuity, and responsible innovation.

Starting with local healthcare realities, Elisence is designed to support regional adaptation, country-aware deployment, and responsible international growth.

Our ambition is a future where connected healthcare experiences remain valuable before illness, during illness, and after illness.

A future where prevention matters more.

A future where continuity becomes normal.

A future where healthcare remains connected.

Build responsibly. Earn trust meaningfully. Scale with purpose.

A calmer, more connected, more trusted future for healthcare.

Healthcare should not feel fragmented, episodic, reactive, or difficult to navigate.

We believe people deserve a future where healthcare feels more connected, more trusted, more preventative, and easier to understand over time.

A future where prevention matters more.

A future where continuity becomes normal.

A future where people remain meaningfully connected to their health before illness, during illness, and after illness.

A future where trusted participation, communication, wellbeing, medication continuity, body understanding, social health support, and intelligent guidance work together rather than separately.

WHY ELISENCE

- Elisence is designed as a human-centred, connected health ecosystem built around continuity rather than fragmented moments of care.
- Prevention, trusted health intelligence, medication support, body understanding, wellbeing, women’s health, metabolic health, communication, social health participation, and long-term continuity are designed to work together rather than exist separately.
- At the centre is **Elisa** — a trusted continuity companion designed to help people stay connected to healthier routines, supportive participation, communication, wellbeing, and everyday health continuity while remaining intentionally non-clinical and non-diagnostic by design.
- Elisence is designed to build responsibly — earning trust locally, adapting to healthcare realities, and scaling meaningfully over time.

THE ROAD AHEAD

- Responsible validation and real-world learning
- Trusted healthcare and institutional partnerships
- Regional adaptation and localisation
- Healthcare participation and continuity growth
- Responsible international expansion
- Long-term healthcare relationship building
- Community, clinical, and ecosystem collaboration
- Sustainable healthcare impact at scale

OUR BELIEF

The future of healthcare is not more disconnected tools.

It is trusted, connected, preventative, continuous, and more human healthcare experiences working together over time.

Build responsibly.
Earn trust locally.
Scale meaningfully.

ELISENCE

Building a more connected, trusted, and human future for healthcare.

Founder

Sam Asi

Founder & CEO

Prevention • Continuity • Trust • Participation
Designed for responsible healthcare transformation.
