Executive answers (compact)

Question	Answer (evidence-bounded)
What is ELIS?	The intelligence / context / orchestration / connector / health & medical intelligence architecture of the Elisence platform - not a single chatbot or model.
What is Elisa?	The human-facing assistant manifestation (presence, voice relationship, personalization surface) that **consumes** ELIS capabilities under authority limits - not the owner of all system state.
ELIS vs Elisa?	ELIS = architecture/capability plane. Elisa = assistant persona/UX orchestration plane.
ELIS vs ELISENCE?	ELISENCE = full product platform (app + social + security + care + governance). ELIS = intelligence architecture within/across that platform.
Current Voice?	**Established capability with current repair required** (regression) - not absent/future.
Predictive Health?	**Built, not connected.**
MI write?	Authority-gated / current unproven - must not erase read-side catalogue architecture.

PART I - Canonical definitions

1. What ELIS is

ELIS is the evidence-grounded intelligence architecture of Elisence: the set of systems, engines, algorithms, modules, connectors, authority boundaries, provenance expectations, and cross-system relationships that enable context-aware personalization, health intelligence, medical-intelligence support, and governed assistant behaviour.

ELIS is not reducible to:

- a chatbot;
- a single AI model;
- a voice assistant alone;
- a medical chatbot;
- a recommendation engine.

Where the corpus supports it, ELIS is described through:

intelligence · context · personalization · orchestration · connectors · health intelligence · medical intelligence · cross-system reasoning · authority boundaries · state ownership · provenance · explainability · safety · human authority · current ELISENCE manifestation.

2. What Elisa is

Elisa is the assistant manifestation of ELISENCE/ELIS for the human user: a presence (including visual/orb concepts where documented), a conversational and voice-related interface relationship, and a personalization/context consumer.

Locked boundaries

Claim	Status
ELISA ≠ ELIS	PRESERVE
ELISA ≠ SOURCE OF TRUTH	PRESERVE
ELISA ≠ CLINICAL AUTHORITY	PRESERVE
ELISA ≠ ALL SYSTEM OWNERS	PRESERVE
ELISA ≠ UNLIMITED AUTONOMOUS EXECUTION	PRESERVE
SUGGESTION ≠ EXECUTION	PRESERVE
MEMORY ≠ SOURCE OF TRUTH	PRESERVE
CONTEXT ACCESS ≠ DATA OWNERSHIP	PRESERVE
AI OUTPUT ≠ CLINICAL DECISION / PRESCRIPTION	PRESERVE

Voice (locked)

Voice is an established ELISENCE / Elisa capability with prior operational proof. It is currently under targeted regression repair and must not be represented as absent or future.

Status: ESTABLISHED_CAPABILITY_WITH_CURRENT_REPAIR_REQUIRED Prohibited: NOT_IMPLEMENTED · FUTURE-only · never existed · UI_ONLY as sole status · “fully working today” without re-proof.

Historical Assistant vs current Elisa

Family 17 (AI Personalization & Assistant) archaeology establishes historical Assistant architecture as foundation / parallel architecture relative to later Elisa runtime narratives. Do not claim historical Assistant = current Elisa runtime without independent current-reality proof.

3. How ELIS relates to ELISENCE

ELISENCE is the full multi-surface product platform (identity, social, messaging, Pulse/media trust signals, documents, care pathways, programme governance, Country OS, etc.).

ELIS is the intelligence architecture that reads, reasons over, connects, and advises within that platform under authority constraints.

Application UX detail (Wave/Pass/Spark screens, hydration UI chrome, etc.) belongs primarily to the ELISENCE Application Golden (not this document), except where needed to explain intelligence consumption and current maturity.

PART II - Truth model & claim boundaries

4. Golden truth law

Every material claim retains a maturity/evidence class. Do not flatten:

HISTORICAL FACT · CURRENT FACT · DOCUMENTARY CLAIM · DESIGN · IMPLEMENTATION CLAIM · TEST / PASSED · SEALED · DEPLOYED · MOUNTED · RUNTIME PROOF · DEVICE PROOF · OPERATOR-REPORTED CURRENT · PARTIAL · AUTHORITY-GATED · FAIL-CLOSED · CURRENT REGRESSION · BUILT_NOT_CONNECTED · FUTURE · SUPERSEDED · UNKNOWN

5. Critical claim boundaries (selected)

Full register: appendices/I_CLAIM_RED_LINES.json.

Including:

DOCUMENTED ≠ IMPLEMENTED ≠ RUNTIME PROOF ≠ DEVICE PROOF UI ≠ AUTHORITY · UI VISIBLE ≠ BACKEND CONNECTED READ-SIDE ≠ WRITE-SIDE · WRITE UI ≠ PERSISTENCE ROLE ≠ PROFESSIONAL AUTHORITY AI OUTPUT ≠ CLINICAL DECISION / PRESCRIPTION MEMORY ≠ SOURCE OF TRUTH · CONTEXT ACCESS ≠ DATA OWNERSHIP ORCHESTRATION ≠ OWNERSHIP · SUGGESTION ≠ EXECUTION REQUEST ≠ CONFIRMED APPOINTMENT · PATIENT REQUEST ≠ PROVIDER AUTHORITY MEDICATION IDENTITY ≠ PRESCRIPTION · DRAFT ≠ ISSUED TREND ≠ DIAGNOSIS · INFERENCE ≠ DIRECT MEASUREMENT PROGRAMME GOVERNANCE ≠ SUBSYSTEM OWNERSHIP NO ROADMAP ≠ NO CAPABILITY GOLDEN TERMINOLOGY ≠ GOLDEN ARTIFACT

PART III - Architectural layers

Layers below are derived from evidence themes, not a fashionable generic AI stack. Each layer may contain documentary systems that are not currently live.

Layer	Purpose (evidence-bounded)	State / authority notes
Human Interaction / Elisa	Assistant presence, voice relationship, UX orchestration	Elisa consumes; does not own clinical truth
Context & Personalization	Preferences, memory, context packs	Memory ≠ SoT
Identity / Trust	Passport, authn/z, consent, session	Passport/Security documentary owner
Intelligence & Governance	AI governance stack, routers, policy, validation	Advisory under policy
Medical Intelligence	Catalogue identity, clinical support views, drafts	Read ≠ prescribe
Health / Sensing Intelligence	Sensors, wellness, body/blood, patterns	Inference ≠ measurement
Connectors & Contracts	Intelligence Connector, APIs, channel adapters	Connector ≠ decision owner
Cross-System Services	CSA topology, Control Center, charts	Spec ≠ current runtime
Provenance / Audit	WORM, audit, explainability readiness	Trust coverage
Programme Governance	DONE/BBVP/checkpoints	Meta; not subsystem owner
Application Projections	Social/media/messaging surfaces that **project** ELIS	Projection ≠ ownership

Detailed system placement: appendices/L_DOMAIN_SUMMARIES.json + A_SYSTEMS_ATLAS_55.json.

PART IV - Atlases (counts & meaning)

6. Systems (55)

SYSTEMS_RECONCILED=55 (programme baseline). Complete technical register: appendices/A_SYSTEMS_ATLAS_55.json.

These are documentary reconciled systems/components. Do not claim all 55 are currently live.

Family-context note: Cross-System Architecture archaeology identified 20 systems in that family's census - a family-context count, not a replacement for the whole-ELIS 55.

7. Engines (78 distinct reconciled)

ENGINE_SOURCE_RECORDS_HARVESTED=79 DISTINCT_RECONCILED_ENGINES=78

79 family-level engine records were harvested across the documentary corpus. Evidence-based reconciliation resolved one cross-family same-name pair into a single canonical Visibility Engine, producing 78 distinct reconciled engine records while preserving both source memberships:

SOC-ENG-002 + ACH-ENG-004 -> ELIS-ENG-R-0001 (Visibility Engine, MEMBER_COUNT=2).

This is not data loss and not a missing 79th distinct engine. Atlas: appendices/B_ENGINES_ATLAS.json.

Do not claim 79 distinct engines. Do not claim all 78 are active production engines.

8. Algorithms (60)

ALGORITHMS_REGISTERED=60. Atlas: appendices/C_ALGORITHMS_ATLAS.json.

Distinguish where evidence permits: algorithm · rule · engine · model · policy · state machine · heuristic. “Algorithm” ≠ synonym for AI.

9. Modules (156 distinct reconciled)

MODULES_RECONCILED=156 (authoritative reconciled module atlas).

The authoritative reconciled module atlas contains 156 distinct module records. An earlier “155 modules” baseline was a census-label error and appears to have been conflated with the independently correct count of 155 version families (VERSION_FAMILIES=155 - unchanged).

Domain summaries in narrative; complete tables in appendices/D_MODULES_ATLAS.json.

10. Capabilities (541 groups)

RAW_CAPABILITY_RECORDS_HARVESTED=541 RECONCILED_CAPABILITY_GROUPS=541

Meaning: capability records harvested from family archaeology ledgers, grouped by normalized name for reconciliation.

Not meaning: 541 independently production-ready features.

Complete register: appendices/E_CAPABILITIES_RECONCILED_541.json.

PART V - Non-roadmap law

11. Non-roadmap capabilities (mandatory)

Population	Count	Scope
Documentary non-roadmap register	**46**	Items recorded in family non-roadmap archaeology harvests
Golden non-roadmap inclusion	**53**	Documentary NR plus current-reality extras (e.g. Wave/Pass/Spark/vault/predictive) classified for Golden inclusion

Not a contradiction - different populations/scopes. Details: appendices/G_NON_ROADMAP_POPULATIONS.json.

Law: NO ROADMAP ≠ NO CAPABILITY. Do not invent retrospective fake roadmap lineage. ELISENCE development included meaningful capabilities outside formal roadmaps.

PART VI - Intelligence domains

12. Intelligence Connector

Evidence places connector/channel/contract systems as integration fabric: normalize, transform, route, and expose signals between owners.

Preserve: CONNECTOR ≠ DECISION OWNER · ORCHESTRATION ≠ OWNERSHIP.

Maturity varies by connector instance - see systems/engines atlases; do not upgrade to universal runtime proof.

13. AI Personalization & Assistant (Family 17)

Verified archaeology establishes personalization, context, preferences, memory concepts, assistant I/O, safety and consent relationships.

Preserve:

- Historical Assistant as FOUNDATION + PARALLEL_ARCHITECTURE relative to later Elisa narratives (where verified).
- SUGGESTION ≠ EXECUTION
- MEMORY ≠ SOURCE OF TRUTH
- CONTEXT ACCESS ≠ DATA OWNERSHIP
- Historical Assistant ≠ automatic current Elisa runtime

14. Medical Intelligence

Major separation (locked):

Component class	Representation
Medicine catalogue / identity / search / dm+d / pack / manufacturer / SSP	**Read-side architecture - preserve**
Dose UI	UI ≠ prescription write
Prescription draft	DRAFT ≠ ISSUED
Prescriber / pharmacy authority	AUTHORITY_GATED
Send to pharmacy / patient / both	Locked/gated ≠ catalogue absence

Locks:

- MEDICATION_INTELLIGENCE_READ_STATUS=DISTINCT_READ_SIDE_PRESERVE
- PRESCRIPTION_WRITE_STATUS=AUTHORITY_GATED_CURRENT_UNPROVEN

15. Health / sensing intelligence

Relationships involve Body/Blood Scan, Device & Sensor Layer, hydration/weight/wellness, nutrition, activity, sleep/recovery, pattern intelligence.

Measurement classes (where evidenced): DIRECT · DERIVED · ESTIMATED · INFERRED · PREDICTED · PROXY

Laws: INFERENCE ≠ DIRECT MEASUREMENT · TREND ≠ DIAGNOSIS · TRACKING ≠ CLINICAL AUTHORITY

16. Predictive / Respective Health (locked)

Status: BUILT_NOT_CONNECTED

UI_BUILT=YES · BACKEND_BUILT=YES · UI_BACKEND_WIRING=NOT_YET

Not: NOT_IMPLEMENTED · CONNECTED_RUNTIME · live clinical decision engine.

17. Cross-System Architecture (Family 18 - sealed archaeology)

Family-context census (not whole-ELIS replacement counts):

SYSTEMS_IDENTIFIED=20 · AUTHORITY_BOUNDARIES=22 · INVARIANTS=10 · CONFLICTS=9 · UNKNOWNNS=12

Purpose (historical documentary): define how platform cores, AI governance, Phase 3 health intelligence UI, and Phase 10 navigation interact without collapsing authorities.

Historical specifications ≠ current runtime truth.

PART VII - Authority & source of truth

18. Authority architecture

Primary documentary authority owners (domain map) live in appendices/F_AUTHORITY_AND_SOURCE_OF_TRUTH.json.

Illustrative locked owners:

Domain	Documentary authority owner
Passport / Authentication / Session / Privacy / Consent / Audit / Provenance	ELIS-FAM-001
Profile	ELIS-FAM-007
Medical / Prescription / Pharmacy	ELIS-FAM-009
Sensors	ELIS-FAM-013
AI Assistant family	ELIS-FAM-019
Achievements	ELIS-FAM-011
Export	ELIS-FAM-014
Programme governance	ELIS-FAM-018
Platform testing philosophy	ELIS-FAM-020 / REMAIN_UNRESOLVED

Law: SHARED USE ≠ SHARED AUTHORITY · READ PROJECTION ≠ WRITE OWNER.

19. Source of truth vs projection

Canonical owners write; other families may project read models. Caches/local state are not automatic SoT. Elisa/memory/context layers are not SoT.

PART VIII - Maturity, limitations, evolution

20. Current limitations that must appear in this Golden

From pre-Golden disposition (appendices/J_...):

1. Voice - established + current regression (locked wording).
2. BBVP / testing philosophy - sealed D. REMAIN_UNRESOLVED (doctrine, not missing product).
3. MI - read preserve / write gated unproven.
4. Predictive Health - built not connected.
5. Application-side limitations (messaging peer identity/avatar, vault partial, presence/calls, localisation completion, parity unknown) are noted for intelligence consumption context but detailed in Application Golden.

21. Conflicts, gaps, unknowns

Master registers survive into Golden preparation:

- Conflicts 132
- Gaps 187
- Unknowns 43

Full machine-readable sets: appendices/H_CONFLICTS_GAPS_UNKNOWNS.json. Do not silently resolve.

22. Historical evolution (high level)

Timeline (documentary eras only): appendices/K_HISTORICAL_TIMELINE.json.

Includes acquisition/classification -> foundation archaeology -> clinical/sensing -> achievements/export/AI/CSA/programme -> unresolved testing philosophy sealed -> BBVP/Done/checkpoint generations -> Phase 3/9/10 programme roadmaps.

PART IX - What must never be confused

1. ELIS architecture vs Elisa persona
2. ELIS vs full ELISENCE application product
3. Documentary atlas counts vs live production inventory
4. 541 capability groups vs 541 shipped features
5. 46 vs 53 non-roadmap populations
6. Family CSA “20 systems” vs whole-ELIS “55 systems”
7. 79 family-level engine harvest records vs 78 distinct reconciled engines
8. 155 version families vs 156 distinct modules
9. Catalogue read vs prescribing authority
10. Built Predictive UI/backend vs connected runtime
11. Historical Voice proof vs current Voice regression
12. Historical Assistant docs vs current Elisa runtime
13. Connector/orchestration vs decision ownership
14. Programme DONE/SEALED language vs device proof
15. Roadmap absence vs capability absence

Blocker Class	Capability	Current State	Evidence	Item Id	Previous State	Prohibited Golden Wording	Proof Required Before Status Upgrade	Required Golden Wording	Why
B. GOLDEN_ALLOWED_WITH_EXPLICIT_REGRESSION_NOT E	Voice	CURRENT_REGRESSION	CR-REG-001; PHASE13_VOICE_STABLE_DEVICE_PROVEN_CHECKPOINT_20260531; OPERATOR_REPORTED prior 5-language + current failure	PGD-001	DEVICE_PROVEN / multilingual-tested (historical)	NOT_IMPLEMENTED; FUTURE-only Voice; Voice does not exist; Voice never worked; UI_ONLY as sole status	Device/runtime re-proof of restored Voice across intended languages	Voice is an established ELISENCE / Elisa capability with prior operational proof. It is currently under targeted regression repair and must not be represented as absent or future.	Established capability with prior operational proof; current failure is regression, not absence. Golden can be truthful with locked wording without waiting for repair.
B. GOLDEN_ALLOWED_WITH_EXPLICIT_REGRESSION_NOT E	Messaging peer identity / avatar projection	CURRENT_PARTIAL / PROJECTION_REGRESSION	CR-REG-002; Aug 2026 peer identity forensic packs; CURRENT_REALITY messaging register	PGD-002	EXPECTED_ENRICHED_PEER_IDENTITY (operator/historical expectation)	Messaging is broken; Messaging does not work; No messaging capability; All messaging unavailable	Device proof that peer display name and avatar enrich correctly on Connections and Messaging	Messaging text rooms are present and operational as a messaging core. Peer display-name and avatar enrichment on Connections/Messaging is currently regressed and must not be described as fully complete identity projection.	Evidence bounds defect to participant identity/avatar enrichment projection - not messaging transport collapse. Messaging core may be represented as working with explicit identity/avatar limitation.
C. GOLDEN_ALLOWED_WITH_SCOPE_LIMITATION	Documents / Private Vault	CURRENT_PARTIAL	ElisenceDocumentVaultStore SOURCE_PRESENT; attachment architecture register	PGD-003	DOCUMENTARY_UNDER_CLASSIFIED	Full cross-platform vault complete; Proven sole ELISENCE DB architecture without evidence; Documents absent from ELISENCE	Android parity + persistence/authority matrix + any server-sync claims independently proven	ELISENCE includes Documents / Private Vault surfaces with evidenced iOS vault storage and messaging/medical document relationships. Completeness is partial; Android/server authority must not be overstated.	Coherent iOS vault/documents capability exists partially; cross-platform/server completeness unproven; taxonomy under-classified but Golden can describe with scope limits.
C. GOLDEN_ALLOWED_WITH_SCOPE_LIMITATION	Predictive / Respective Health Intelligence	BACKEND_READY_CLIENT_NOT_WIRED	PredictiveHealthIntelligenceView contractOnly; operator UI/backend built not wired	PGD-004	UI_BUILT + BACKEND_BUILT (operator)	NOT_IMPLEMENTED; Fully connected Predictive Health runtime; Live predictive clinical decisions	Evidence of wired UI↔backend read/write paths on device	Predictive Health Intelligence has built UI and reported backend components, but UI↔backend wiring is not yet connected. It is not a live connected clinical runtime.	Built components exist; connection is not proven. Represent as built-not-connected.

Blocker Class	Capability	Current State	Evidence	Item Id	Previous State	Prohibited Golden Wording	Proof Required Before Status Upgrade	Required Golden Wording	Why
C. Explicit preview shells - represent as UI foundation, not live communication.
D. GOLDEN_ALLOWED_WITH_UNKNOWN_STATUSES	Appointments (patient vs professional)	HISTORICALLY_PROVEN_CURRENT_UNKNOWN / AUTHORITY_GATED	documentary appointment laws; current reality MI/appointments register	PGD-007	DOCUMENTARY dual-entry architecture	All appointments live end-to-end; Provider write authority proven solely by UI	Device matrix for patient submit + professional authority paths	Appointment surfaces distinguish patient request workflows from professional views. A request is not a confirmed appointment. Professional UI is not automatically provider write authority.	Patient workflow and professional shell can be described with authority boundaries; connected provider write must remain unclaimed without fresh proof.
C. GOLDEN_ALLOWED_WITH_SCOPE_LIMITATION	Medical Intelligence read vs prescription write	READ_SIDE_HISTORICAL / WRITE_AUTHORITY_GATED	ELIS-FAM-009 archaeology; current reality MI register	PGD-008	DOCUMENTARY catalogue + authority model	No Medical Intelligence because send is locked; Catalogue equals prescribing; Draft equals issued	Separate proofs for catalogue read vs draft vs issued vs pharmacy/patient send	Medicine catalogue / identity read capabilities are distinct from prescribing and pharmacy send authorities. Locked or gated clinical writes do not imply catalogue absence.	Read-side catalogue/identity must not be erased by locked clinical write actions.
C. GOLDEN_ALLOWED_WITH_SCOPE_LIMITATION	Whole-app 8-language completion	NOT_PROVEN	locale protocol forensics; current localisation register	PGD-009	LANGUAGE_AUTHORITY=8	Entire app fully localised in 8 languages; No localisation gaps	Whole-app localisation completion matrix including RTL and MI surfaces	ELISENCE maintains an eight-language authority (EN/FA/AR/TR/RO/SQ/ES/EL). Whole-application eight-language completion is not proven; some surfaces may show incomplete localisation or raw keys.	Authority architecture can be stated; whole-app completion cannot.

Blocker Class	Capability	Current State	Evidence	Item Id	Previous State	Prohibited Golden Wording	Proof Required Before Status Upgrade	Required Golden Wording	Why
D. GOLDEN_ALLOWED_WITH_UNKNOWN_STATUSES	Android / iOS parity (general)	UNKNOWN	current reality parity register	PGD-010	UNKNOWN	Full iOS/Android parity proven; Identical behaviour on both platforms (unsupported)	Capability-by-capability parity matrix	Cross-platform parity is not fully proven. Claims must be scoped to evidenced platform (often iOS) unless parity is demonstrated.	Parity unknown does not block truthful platform Golden if stated as unknown and iOS-weighted evidence is not generalized.
D. GOLDEN_ALLOWED_WITH_UNKNOWN_STATUSES	BBVP / testing philosophy (ELIS-FAM-020)	REMAIN_UNRESOLVED (documentary)	Family 20 seal; UNR archaeology	PGD-011	Sealed unresolved	BBVP family product complete; Unresolved means irrelevant	Programme reclassification authority if ever moved from unresolved	BBVP / platform verification philosophy remains a sealed unresolved documentary item with nearest programme adjacency; it is not a missing product feature.	Doctrine belongs in ELIS Golden as unresolved /programme philosophy - not product absence.

Voice Golden Status	ESTABLISHED_CAPABILITY_WITH_CURRENT_REPAIR_REQUIRED
Voice Blocker Class	B. GOLDEN_ALLOWED_WITH_EXPLICIT_REGRESSION_NOTE
Voice Golden Wording	Voice is an established ELISENCE / Elisa capability with prior operational proof. It is currently under targeted regression repair and must not be represented as absent or future.
Voice Golden Prohibited Claims	NOT_IMPLEMENTED; FUTURE-only; never existed; UI_ONLY as sole status; fully working today without proof
Voice Repair Required Before Status Upgrade	YES - device/runtime re-proof required before upgrading off CURRENT_REGRESSION

Question	CAN THE GOLDEN ACCURATELY REPRESENT THE SYSTEM TODAY? (not: is every feature perfect?)
Hard Golden Blockers	0
Hard Blocker List	
Nonblocking Current Limitations	11
Elis Golden Ready	YES_WITH_EXPLICIT_CURRENT_LIMITATIONS
Elis Golden Ready Why	Intelligence/architecture Golden can be truthful if Voice regression, BBVP unresolved, and MI/Predictive limitations are locked in wording.
Elisence Application Golden Ready	YES_WITH_EXPLICIT_CURRENT_LIMITATIONS
Elisence Application Golden Ready Why	Application Golden can accurately describe working social/security core and established architecture while stating Voice, peer-identity/avatar, vault, predictive, presence/call, localisation, and parity limitations.
Prior Ready For Separate Golden Mission Was No	YES - because disposition/wording was unlocked; this mission unlocks truthful representation without requiring repairs
Two Golden Model Locked	YES
Repairs Still Required For Product	YES (Voice, peer identity) - but repairs are not Golden-creation prerequisites if wording is locked
Golden Created	NO
