Table of Contents

Golden Capability, Authority & Operational Reality Reference

PART I — Golden Authority and Scope

- Claim ladder (non-negotiable)
- Locked documentary census
- Locked operational census
- Locked operational assessments (do not upgrade)

PART II — Canonical System Identity

- MI-SYS-001 — Medical Intelligence Platform
- MI-SYS-002 — GP / Primary Care Runtime & Doctor Workspace
- MI-SYS-003 — Medical Journey / Medical Tracking (Timeline-centred)
- MI-SYS-004 — Pharmacy / Medication Intelligence Execution (NHS dm+d path)
- MI-SYS-005 — Prescription Runtime (recovery surface)

PART III — Historical Evolution

- MI-ERA-1 — Medical Intelligence Contract Freeze V1.0
- MI-ERA-2 — Medical Journey Product Contract + Sensor Contract appendix
- MI-ERA-3 — Medical Journey Black-Box Phases1–7 preservation stamp
- MI-ERA-4 — GP & Prescription recovery checkpoint 2026-06-26
- MI-ERA-5 — Medication Intelligence Execution roadmap (dm+d foundation + future phases)
- Ambiguous file disposition (1/1)

PART IV — Five-System Architecture

PART V — Ownership Law

PART VI — Actor / Access / Authority Model

- Actor types (10)
- Authority law
- Access tiers (6)
- Product access model
- Professional authority
- Patient vs professional product boundary

PART VII — Medical Intelligence Core

- Engines (13)
- Algorithms (8)
- Modules (18)

PART VIII — Medical Tracking

PART IX — GP / Primary Care

PART X — Prescription Intelligence Boundary

PART XI — Pharmacy Relationship

PART XII — Medication Reference Authority

PART XIII — Medication Identity / Product / Pack Model

PART XIV — Workflow Architecture

- MI-WF-001 — Intelligence hierarchy processing
- MI-WF-002 — Consent-limited intelligence analysis
- MI-WF-003 — Doctor medication search
- MI-WF-004 — Condition-guided catalogue exploration
- MI-WF-005 — dm+d catalogue import
- MI-WF-006 — Pharmacy dispensing orchestration (roadmap)
- MI-WF-007 — Prescription OCR capture (roadmap)
- MI-WF-008 — GP/Prescription pre-commit recovery gate
- MI-WF-009 — Timeline append/correct/recover
- MI-WF-010 — Consultation preparation from timeline
- Routes / endpoints (3 documentary named)
- Data stores / registries (5)

PART XV — Human Authority

SYSTEM INTELLIGENCE vs HUMAN CLINICAL AUTHORITY

PART XVI — Safety

PART XVII — Privacy / Permissions

PART XVIII — Provenance / Audit

PART XIX — Android Operational Reality

PART XX — iOS Mirror / Operational Reality

PART XXI — Backend Reality

PART XXII — Cross-Platform Parity

PART XXIII — Tests / Pass / Seal / Device Proof

- Test families
- Device-proof items (reconciled; avoid double-count)

PART XXIV — 48-Capability Golden Ledger & Operational Matrix

Golden ledger rows

Operational reality matrix (authoritative columns)

PART XXV — ELISA / Sensor / Chart Adjacency

PART XXVI — Conflicts

MI-C-01 — Medical Intelligence vs Medication Intelligence naming

MI-C-02 — Filename Medical tracking vs Medical Journey Product Contract body

MI-C-03 — MI never prescribe vs roadmap prescribing intelligence language

MI-C-04 — Device proof PASS vs final DEVICE_PROOF_FAILED

MI-C-05 — Black-box 15250 PASS vs no raw logs in corpus

MI-C-06 — Phase1 medication foundation complete vs later phases roadmap

MI-C-07 — GP operational claims vs NOT_READY commit gate

PART XXVII — Gaps

Immutability

ELISENCE MEDICAL INTELLIGENCE

Golden Capability, Authority & Operational Reality Reference

Subtitle: Medication · Prescription · Tracking · Primary Care · Pharmacy · Professional Authority

These terms name adjacent domains. They do **not** imply ownership convergence.

Mission: ELISENCE_MEDICAL_INTELLIGENCE_GOLDEN_CAPABILITY_AUTHORITY_AND_OPERATIONAL_REALITY_REFERENCE_V1
Generated: 2026-08-13T02:17:02+01:00 **Golden PDF:** NOT CREATED in this mission **Authority bases:** Documentary archaeology census lock 06_MI_CENSUS_LOCK.json + Operational reconciliation census lock 14_MI_RECONCILED_OPERATIONAL_CENSUS_LOCK.json

PART I — Golden Authority and Scope

This Golden consolidates two locked layers without new archaeology:

- 1. **Documentary architecture** — what the recovered Medical Intelligence / GP / Tracking / Pharmacy corpus claims.
- 2. **Operational reality** — what repository and runtime reconciliation proved, partially proved, or left unproven.

Claim ladder (non-negotiable)

One capability may appear in multiple operational categories. Category counts are **not** mutually exclusive.

Locked documentary census

PART II — Canonical System Identity

Medical Intelligence is **not** a monolithic replacement for medication, prescription, GP, tracking, or pharmacy systems.

Canonical systems from documentary reconstruction:

MI-SYS-001 — Medical Intelligence Platform

- **Aliases:** Medical Intelligence, MI, ELISENCE-MI-CONTRACT-V1
- **Purpose:** Transform medical data into understandable, explainable, clinically safe insights under human control; One Decision Brain coordination
- **Primary actors:** PATIENT, HEALTHCARE_PROFESSIONAL, CARER, DOCTOR, NURSE, PHARMACIST
- **Owned:** Context/Pattern/Correlation/Clinical Intelligence layers; Explainable AI; Informational risk scoring; Human-reviewable conclusions
- **Non-owned adjacent:** Prescribing authority; Hardware sensor drivers; Diagnosis; Independent Medication Intelligence rebuild
- **Maturity:** DOCUMENTED / FROZEN_CONTRACT
- **Sources:** MI-SRC-002, MI-SRC-003

MI-SYS-002 — GP / Primary Care Runtime & Doctor Workspace

- **Aliases:** GP Platform, GP Care, Doctor Workspace
- **Purpose:** GP-facing runtime, passport/consent, doctor workspace and prescription-adjacent medication search surfaces
- **Primary actors:** GP, DOCTOR_WORKSPACE, OPERATOR
- **Owned:** GP Runtime; Doctor Workspace Route; GP Passport/Consent surfaces (claimed)
- **Non-owned adjacent:** Prescribing authority grant; Pharmacy dispensing ownership; Medical Intelligence brain ownership
- **Maturity:** IMPLEMENTED_CLAIM / DEVICE_PROOF_PARTIAL / GATED_NOT_READY
- **Sources:** MI-SRC-001, MI-SRC-002

MI-SYS-003 — Medical Journey / Medical Tracking (Timeline-centred)

- **Aliases:** Medical Journey Platform, Medical Tracking (filename), phase3/medical_journey
- **Purpose:** Continuous medical journey via Timeline SSoT; track/record medical objects and events with trust/provenance
- **Primary actors:** PATIENT, CAREGIVER, CLINICIAN, GP, SPECIALIST
- **Owned:** Timeline; Medical Event model; Trust Layer; Tracking of core objects
- **Non-owned adjacent:** Clinical diagnosis; Prescribing; Sensor hardware drivers
- **Maturity:** DOCUMENTED product contract + BLACK_BOX stamp claims
- **Sources:** MI-SRC-005, MI-SRC-004

MI-SYS-004 — Pharmacy / Medication Intelligence Execution (NHS dm+d path)

- **Aliases:** Pharmacy roadmap, Medication Intelligence Execution
- **Purpose:** NHS-aware medication catalogue/search and future pharmacy orchestration / pack / safety intelligence
- **Primary actors:** GP, PHARMACY, USER_SEARCH
- **Owned:** dm+d ingestion; VMP catalogue; medication search (claimed); roadmap pharmacy orchestration
- **Non-owned adjacent:** Prescribing legal authority; Medical Intelligence Contract brain layers
- **Maturity:** PHASE1_FOUNDATION_CLAIMED + PHASES2-10_ROADMAP
- **Sources:** MI-SRC-006, MI-SRC-001

MI-SYS-005 — Prescription Runtime (recovery surface)

- **Aliases:** Prescription, Prescription Intelligence (engine name in MI contract)
- **Purpose:** Prescription-related runtime recovery and medication search/catalogue surfaces under GP prescriptions framing
- **Primary actors:** DOCTOR_WORKSPACE, GP
- **Owned:** Prescription recovery components named in checkpoint
- **Non-owned adjacent:** Legal prescribing authority; Pharmacy dispensing
- **Maturity:** IMPLEMENTED_CLAIM / TESTED_CLAIM_PARTIAL / NOT_READY_TO_COMMIT

- **Sources:** MI-SRC-001, MI-SRC-002

PART III — Historical Evolution

HISTORICAL_ERAS = 5 (preserved; not rewritten into a false linear progress narrative).

MI-ERA-1 — Medical Intelligence Contract Freeze V1.0

- Maturity: FROZEN
- Sources: MI-SRC-002, MI-SRC-003

MI-ERA-2 — Medical Journey Product Contract + Sensor Contract appendix

- Maturity: AUTHORITATIVE_DOCUMENTED
- Sources: MI-SRC-005

MI-ERA-3 — Medical Journey Black-Box Phases1–7 preservation stamp

- Maturity: SEALED_CLAIM_DOCUMENTARY
- Sources: MI-SRC-004

MI-ERA-4 — GP & Prescription recovery checkpoint 2026-06-26

- Maturity: IMPLEMENTED_CLAIM/NOT_READY
- Sources: MI-SRC-001

MI-ERA-5 — Medication Intelligence Execution roadmap (dm+d foundation + future phases)

- Maturity: PARTIAL_FOUNDATION+ROADMAP
- Sources: MI-SRC-006

Ambiguous file disposition (1/1)

- File: Medical tracking contract .pdf
- Disposition: CROSS_SYSTEM
- Uncertainty: Filename Medical tracking; body Medical Journey Product Contract v1.0 + SENSOR_CONTRACT_V1

PART IV — Five-System Architecture

This shape is documentary synthesis. It is **not** a runtime-mount proof for every box.

PART V — Ownership Law

The following distinctions are **NON-NEGOTIABLE**:

Additionally: **Medical Intelligence Contract ≠ Medication Intelligence Execution** (pharmacy/roadmap document).

PART VI — Actor / Access / Authority Model

Actor types (10)

- GENERAL_USER/PATIENT
- CAREGIVER/FAMILY
- HEALTHCARE_PROFESSIONAL
- GP/DOCTOR_WORKSPACE
- NURSE
- PHARMACIST/PHARMACY
- SPECIALIST
- ORGANISATION_UNKNOWN
- ADMINISTRATIVE_UNKNOWN
- ENGINEERING_OPERATOR

Authority law

- REGISTRATION ≠ VERIFICATION
- PROFESSIONAL IDENTITY ≠ PRESCRIBING AUTHORITY
- VALID CREDENTIAL CLAIM ≠ VERIFIED PROFESSIONAL AUTHORITY
- UI VISIBILITY ≠ RUNTIME AUTHORITY
- CLIENT-SIDE HIDING ≠ SERVER-SIDE ENFORCEMENT

Access tiers (6)

- **MI-TIER-001 PATIENT / GENERAL PERSON** — MI supports people; patient owns data; MJ patient journey — sources MI-SRC-002, MI-SRC-005
- **MI-TIER-002 CAREGIVER / FAMILY (permissioned)** — Family & Care contract optional authorisations — sources MI-SRC-005
- **MI-TIER-003 HEALTHCARE PROFESSIONAL / CLINICIAN** — MI supports professionals; accessibility doctors/nurses; clinician-entered cannot be overridden — sources MI-SRC-002, MI-SRC-005
- **MI-TIER-004 GP / DOCTOR WORKSPACE** — GP Runtime/Doctor Workspace/Prescription surfaces — sources MI-SRC-001
- **MI-TIER-005 PHARMACIST / PHARMACY ACTOR** — Accessibility includes pharmacists; pharmacy orchestration roadmap — sources MI-SRC-002, MI-SRC-006
- **MI-TIER-006 ENGINEERING / OPERATOR** — Checkpoint gates, APK guards, commit blockers — sources MI-SRC-001

Product access model

- Documentary: TIERED_MEDICAL_INTELLIGENCE_ACCESS_MODEL=PARTIALLY_SUPPORTED
- Corpus distinguishes patient/person, permissioned caregivers, healthcare professionals, GP/Doctor Workspace, pharmacists/pharmacy orchestration, and engineering operators. Light patient journey/medication objects are separated from professional Doctor Workspace search and from roadmap pharmacy/prescribing-intelligence targets. No explicit paid/premium tier found.
- Runtime UI: TIERED_ACCESS_UI_MODEL=SUPPORTED
- Runtime gating: TIERED_ACCESS_RUNTIME_MODEL=PARTIALLY_SUPPORTED
- Authority model: TIERED_ACCESS_AUTHORITY_MODEL=PARTIALLY_SUPPORTED

Difference: UI demonstrates a supported tiered presentation (patient / professional / pharmacy / request shells). Runtime and authority enforcement are only **partially** proven. End-to-end professional fail-closed remains **UNPROVEN**.

Professional authority

- Documentary fail-closed model: PARTIALLY_SUPPORTED
- MI Contract hard-forbids prescribe/diagnose/dosage recommendations and requires human review; GP Condition-guided exploration explicitly excludes prescribing. However professional verification protocol is not specified, and Pharmacy roadmap uses aspirational prescribing-intelligence language without an evidenced fail-closed verifier.
- Server gate: PARTIALLY_SUPPORTED
- Client gate: PARTIALLY_SUPPORTED
- End-to-end fail-closed: UNPROVEN

Do **not** infer verified professional or prescribing authority from UI separation alone.

Patient vs professional product boundary

Plane	Evidenced scope	Not evidenced as automatic grant
Lighter patient / general-user	Medication viewing/request shells, journey/track-ing objects, informational surfaces, locked request runtime	Prescribing, professional mutation, verified clinical authority
Advanced professional	Doctor workspace, medication search/reference, condition-guided exploration (no prescribe), SSP/AMPP/GI panels, capability-gated issuing flags	End-to-end verified-prescriber authority; full pharmacy orchestration

Law: LIGHT PATIENT MEDICATION FUNCTION ≠ PROFESSIONAL PRESCRIBING INTELLIGENCE

PART VII — Medical Intelligence Core

Canonical: Medical Intelligence Platform

- Purpose: Transform medical data into understandable, explainable, clinically safe insights under human control; One Decision Brain coordination
- Hierarchy (documentary): Context → Pattern → Correlation → Clinical Intelligence → Explainable AI → Human Review
- Hard nevers: diagnose; replace clinicians; prescribe; recommend dosage/med changes/emergency; claim certainty; invent clinical facts
- One Decision Brain: orchestrates; does not duplicate Medication / Prescription / Lab / GP / Sensor / Timeline engines
- Operational maturity: documentary breadth » currently proven operational subset
- Android/iOS/backend: see Parts XIX–XXI; assessments locked PARTIALLY_SUPPORTED / iOS device UNPROVEN

Engines (13)

- **MI-ENG-001** Medical Context Engine — Understand medical context — logic RULE/UNKNOWN — maturity DOCUMENTED/FROZEN — owner MI-SYS-001
- **MI-ENG-002** Pattern Detection — Repeated observations — logic RULE/UNKNOWN — maturity DOCUMENTED/FROZEN — owner MI-SYS-001

- **MI-ENG-003** Correlation Engine — Discover relationships — logic `RULE/UNKNOWN` — maturity `DOCUMENTED/FROZEN` — owner `MI-SYS-001`
- **MI-ENG-004** Medication Intelligence — Authoritative medication engine — logic `UNKNOWN` — maturity `DOCUMENTED_AS_AUTHORITATIVE` — owner `EXTERNAL_TO_MI_REBUILD`
- **MI-ENG-005** Prescription Intelligence — Authoritative prescription engine (named) — logic `UNKNOWN` — maturity `DOCUMENTED_AS_AUTHORITATIVE_NAME` — owner `SEPARATE_ENGINE`
- **MI-ENG-006** Laboratory Intelligence — Authoritative lab engine — logic `UNKNOWN` — maturity `DOCUMENTED_AS_AUTHORITATIVE` — owner `SEPARATE_ENGINE`
- **MI-ENG-007** Explainable AI — Explain conclusions — logic `AI/HYBRID` — maturity `DOCUMENTED/FROZEN` — owner `MI-SYS-001`
- **MI-ENG-008** Risk Scoring — Informational risk — logic `UNKNOWN` — maturity `DOCUMENTED/FROZEN` — owner `MI-SYS-001`
- **MI-ENG-009** Missed Medication Prediction — Adherence risk prediction — logic `MODEL/UNKNOWN` — maturity `DOCUMENTED/FROZEN` — owner `MI-SYS-001`
- **MI-ENG-010** Medication Search Engine — Live medicine search — logic `DETERMINISTIC/SEARCH` — maturity `IMPLEMENTED_CLAIM` — owner `MI-SYS-004`
- **MI-ENG-011** Pack relationship engine (AMPP) — Pack substitution/dispensing relationships — logic `RULE/UNKNOWN` — maturity `ROADMAP` — owner `MI-SYS-004`
- **MI-ENG-012** Equivalent medicine engine — Generic/manufacture/strength equivalents — logic `RULE/UNKNOWN` — maturity `ROADMAP` — owner `MI-SYS-004`
- **MI-ENG-013** Interaction / safety awareness engines — Interaction/allergy/pregnancy/paediatric/controlled drug awareness — logic `RULE/UNKNOWN` — maturity `ROADMAP` — owner `MI-SYS-004`

Algorithms (8)

- **MI-ALG-001** Confidence vs truth separation — Confidence expresses conclusion confidence not truth — maturity `DOCUMENTED`
- **MI-ALG-002** Evidence-required conclusion gate — No evidence → no conclusion — maturity `DOCUMENTED`
- **MI-ALG-003** Condition→catalogue exploration mapping V1 — Fever/Pain→candidate catalogue sets; Cough governance pending — maturity `IMPLEMENTED_CLAIM`
- **MI-ALG-004** dm+d VMP validity filter — Exclude INVALID VMP rows — maturity `IMPLEMENTED_CLAIM`
- **MI-ALG-005** Duplicate-safe import ordering — Deterministic duplicate-safe catalogue import — maturity `IMPLEMENTED_CLAIM`
- **MI-ALG-006** Brand↔generic mapping — Map branded to generic/actives — maturity `ROADMAP`
- **MI-ALG-007** Therapeutic family mapping — NSAIDs/opioids/antibiotics/etc families — maturity `ROADMAP`
- **MI-ALG-008** Fuzzy/phonetic/dosage-aware search ranking — Advanced search ranking — maturity `ROADMAP`

Modules (18)

- **MI-MOD-001** Doctor Workspace — type `UI/WORKSPACE` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-002** GpClinicalContextRing — type `UI` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-003** GpPrescriptionStatusViewModel — type `UI/STATE` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-004** GpConditionGuidedCatalogueExploration — type `UI/FEATURE` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-005** SQLite Medication Catalogue — type `DATA_STORE_MODULE` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-006** SSP Runtime — type `SERVICE` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-007** Global Identity — type `IDENTITY` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-008** GP Passport / Consent surfaces — type `UI/IDENTITY` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-009** NHS dm+d XML/VTM/VMP parsers — type `ADAPTER` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-010** AMP parser (roadmap) — type `ADAPTER` — maturity `ROADMAP`
- **MI-MOD-011** AMPP ingestion (roadmap) — type `ADAPTER` — maturity `ROADMAP`
- **MI-MOD-012** Timeline Platform — type `STATE_AUTHORITY` — maturity `DOCUMENTED`
- **MI-MOD-013** Sensor Platform — type `PLATFORM` — maturity `DOCUMENTED`
- **MI-MOD-014** Medical Documents engine/module — type `DOMAIN` — maturity `DOCUMENTED_AS_AUTHORITATIVE_NAME`
- **MI-MOD-015** Health Event Engine — type `DOMAIN` — maturity `DOCUMENTED_AS_AUTHORITATIVE_NAME`
- **MI-MOD-016** MI-GLOBAL — type `ENGINE_NAME` — maturity `DOCUMENTED_AS_AUTHORITATIVE_NAME`

- **MI-MOD-017** APK Integrity Guard — type `ENGINEERING` — maturity `IMPLEMENTED_CLAIM`
- **MI-MOD-018** phase3/medical_journey preserved tree — type `CODE_SCOPE_STAMP` — maturity `SEALED_CLAIM_DOCUMENTARY`

PART VIII — Medical Tracking

- Documentary relationship: `MEDICAL_TRACKING_MEDICAL_INTELLIGENCE_RELATIONSHIP=ORCHESTRATOR_AND_CONSUMER_PARTIAL`
- Runtime relationship: `TRACKING_INTELLIGENCE_RUNTIME_RELATIONSHIP=ORCHESTRATOR_AND_CONSUMER_PARTIAL`

TRACKING ≠ INTELLIGENCE

Tracking may record, orchestrate, project history, and consume Intelligence outputs **without** owning the intelligence engine. Primary documentary identity is Medical Journey / Timeline SSoT (ambiguous filename disposition: `CROSS_SYSTEM`).

PART IX — GP / Primary Care

- `GP_TO_MEDICAL_INTELLIGENCE=ADJACENT_PROVIDER`
- `APPOINTMENT_TO_GP=ADJACENT_OBJECT`

GP / Primary Care is **adjacent**. It may consume or provide context. It does **not** automatically own Medical Intelligence. Appointment remains an adjacent object — not collapsed into GP or MI.

Operational note: Android Doctor Workspace / medication search are materially proven; commit/device seal readiness remains gated by historical conflicts.

PART X — Prescription Intelligence Boundary

- Documentary: `PRESCRIPTION_TO_MEDICAL_INTELLIGENCE=SEPARATE_AUTHORITATIVE_ENGINE`
- Operational: `PRESCRIPTION_INTELLIGENCE_SEPARATION=PARTIAL`

Plane	Status
PRESCRIPTION DATA	MJ object + GP recovery surface
PRESCRIPTION INTELLIGENCE	Named separate authoritative engine (documentary)
PRESCRIBING WORKFLOW	Doctor search / exploration / OCR roadmap
PRESCRIBING AUTHORITY	NOT GRANTED by this corpus

Documentary architecture identifies separate authority. Repository/runtime evidence only **partially** proves that separation. Do not merge. Do not claim complete operational separation.

MEDICAL INTELLIGENCE ≠ AUTONOMOUS PRESCRIBER

PART XI — Pharmacy Relationship

- Documentary: `PHARMACY_TO_MEDICAL_INTELLIGENCE=DOWNSTREAM_ROADMAP`
- Operational classification: `UI_ONLY` / UI shell + roadmap

Pharmacy workflow ≠ prescribing authority. Runtime pharmacy orchestration is **not** proven complete.

PART XII — Medication Reference Authority

REFERENCE_AUTHORITIES = 5

ID	Name	Maturity	Sources
MI-REF-001	NHS dm+d	IMPLEMENTED_CLAIM_FOUNDATION	MI-SRC-006
MI-REF-002	NHS VTM/VMP catalogue	IMPLEMENTED_CLAIM	MI-SRC-006
MI-REF-003	NHS AMP/AMPP (roadmap)	ROADMAP	MI-SRC-006
MI-REF-004	Internal SQLite medication catalogue	IMPLEMENTED_CLAIM	MI-SRC-001
MI-REF-005	Regulatory alignment targets (NHS/FDA/EU MDR/MHRA/GCC)	DESIGN_ALIGNMENT_CLAIM	MI-SRC-002

BNF is **not** explicitly named. Do not invent unnamed authority databases.

PART XIII — Medication Identity / Product / Pack Model

Where evidenced, preserve distinct identities:

- medicine / generic / brand
- strength / form / route
- product / pack / pack option / manufacturer
- reference provenance / prescription relationship
- AMPP pack read APIs and global-identity pilot (operationally partial; documentary roadmap residual for full global target)

Do not flatten these into a single undifferentiated “drug” field.

PART XIV — Workflow Architecture

WORKFLOWS = 10

MI-WF-001 — Intelligence hierarchy processing

- Actors: SYSTEM, HUMAN_REVIEWER
- Entry: medical data/events
- Steps: Context → Pattern → Correlation → Clinical Intelligence → Explainable AI → Human Review
- Authority gates: No layer bypass, Human review
- Fail-closed: No evidence→no conclusion, Never prescribe/diagnose
- Output: explained conclusion
- Audit: REQUIRED
- Maturity: DOCUMENTED
- Sources: MI-SRC-002

MI-WF-002 — Consent-limited intelligence analysis

- Actors: PATIENT, SYSTEM
- Entry: patient data
- Steps: Consent check → Analyse → Withdrawal limits future
- Authority gates: Consent
- Fail-closed: No consent→no analysis
- Output: limited processing
- Audit: PRIVACY
- Maturity: DOCUMENTED
- Sources: MI-SRC-002

MI-WF-003 — Doctor medication search

- Actors: DOCTOR/GP

- Entry: search query
- Steps: API search → DTO → ViewModel → SSP evaluate → Catalogue
- Authority gates: Doctor Workspace
- Fail-closed: Search≠prescribe
- Output: catalogue results
- Audit: PARTIAL
- Maturity: IMPLEMENTED_CLAIM
- Sources: MI-SRC-001

MI-WF-004 — Condition-guided catalogue exploration

- Actors: DOCTOR/GP
- Entry: condition
- Steps: Condition selected → Catalogue exploration set → Typed search priority
- Authority gates: No recommendation/prescribing
- Fail-closed: Cough governance pending
- Output: exploration candidates
- Audit: PARTIAL
- Maturity: IMPLEMENTED_CLAIM
- Sources: MI-SRC-001

MI-WF-005 — dm+d catalogue import

- Actors: SYSTEM
- Entry: NHS dm+d XML
- Steps: Parse → Filter INVALID → Deterministic order → Duplicate-safe import → Provenance
- Authority gates: NHS reference
- Fail-closed: INVALID excluded
- Output: VMP catalogue
- Audit: PROVENANCE_TRACKING
- Maturity: IMPLEMENTED_CLAIM
- Sources: MI-SRC-006

MI-WF-006 — Pharmacy dispensing orchestration (roadmap)

- Actors: PHARMACY
- Entry: medicine/pack request
- Steps: Stock check → Routing → Dispense/refill → Pack substitution → Validation
- Authority gates: Pharmacy workflow
- Fail-closed: UNKNOWN detail
- Output: dispensing support
- Audit: TARGETED
- Maturity: ROADMAP
- Sources: MI-SRC-006

MI-WF-007 — Prescription OCR capture (roadmap)

- Actors: USER/GP
- Entry: prescription image/printout
- Steps: OCR → Medicine identity
- Authority gates: UNKNOWN
- Fail-closed: UNKNOWN
- Output: medicine names
- Audit: UNKNOWN

- Maturity: ROADMAP
- Sources: MI-SRC-006

MI-WF-008 — GP/Prescription pre-commit recovery gate

- Actors: OPERATOR
- Entry: dirty tree + device
- Steps: Isolate dirty scope → Samsung L4 proof → Stage 12 files → Commit/push
- Authority gates: Device proof, Dirty isolation
- Fail-closed: NOT_READY blocks commit
- Output: blocked or clean commit
- Audit: CHECKPOINT
- Maturity: DOCUMENTED_GATE
- Sources: MI-SRC-001

MI-WF-009 — Timeline append/correct/recover

- Actors: MULTI
- Entry: medical event
- Steps: Append-first → Corrections create audit → Deletes recoverable where governance requires
- Authority gates: Trust/governance
- Fail-closed: No silent replace
- Output: timeline history
- Audit: REQUIRED
- Maturity: DOCUMENTED
- Sources: MI-SRC-005

MI-WF-010 — Consultation preparation from timeline

- Actors: PATIENT/CLINICIAN
- Entry: timeline
- Steps: Summaries → What changed → Questions
- Authority gates: Non-treatment-instruction
- Fail-closed: No treatment instructions from MI
- Output: consultation pack
- Audit: EVIDENCE
- Maturity: DOCUMENTED
- Sources: MI-SRC-002, MI-SRC-005

Routes / endpoints (3 documentary named)

- **MI-RTE-001** UNKNOWN Doctor Workspace Route (named, path not enumerated) — owner MI-SYS-002 — maturity IMPLEMENTED_CLAIM
- **MI-RTE-002** HTTPS Production medication search API (path not enumerated) — owner MI-SYS-004 — maturity IMPLEMENTED_CLAIM
- **MI-RTE-003** UNKNOWN GP Runtime / Care / Passport / Consent surfaces (named) — owner MI-SYS-002 — maturity IMPLEMENTED_CLAIM

Data stores / registries (5)

- **MI-STORE-001** Medication catalogue — VMP/VTM (+ roadmap AMP/AMPP) — AUTHORITATIVE_REFERENCE_CLAIM — maturity IMPLEMENTED_CLAIM
- **MI-STORE-002** SQLite catalogue on device/runtime — medication catalogue — LOCAL_CATALOGUE — maturity IMPLEMENTED_CLAIM
- **MI-STORE-003** Medical Timeline — medical events/history — AUTHORITATIVE — maturity DOCUMENTED
- **MI-STORE-004** Audit/version history for events — audit — AUTHORITATIVE — maturity DOCUMENTED

- **MI-STORE-005** Global Identity / Passport state — identity — UNKNOWN — maturity IMPLEMENTED_CLAIM

PART XV — Human Authority

SYSTEM INTELLIGENCE vs HUMAN CLINICAL AUTHORITY

MI-HUM-001 — Significant intelligence conclusions

- System may: Prepare explained evidence-backed conclusions
- System may not: Remove human review; prescribe; diagnose
- Human actor: HEALTHCARE_PROFESSIONAL/PATIENT_REVIEWER
- Verification: HUMAN_REVIEW_CAPABILITY
- Audit: REQUIRED
- Sources: MI-SRC-002

MI-HUM-002 — Prescribing

- System may: Support search/reference/exploration
- System may not: Prescribe or recommend dosage/med changes
- Human actor: PRESCRIBER (NOT GRANTED BY CORPUS)
- Verification: NOT_DOCUMENTED_IN_CORPUS
- Audit: N/A
- Sources: MI-SRC-002, MI-SRC-001

MI-HUM-003 — Clinician-entered medical history

- System may: Explain/summarise around it
- System may not: Override clinician-entered information
- Human actor: CLINICIAN
- Verification: CLINICIAN_AUTHORITY
- Audit: REQUIRED
- Sources: MI-SRC-005

MI-HUM-004 — Emergency care seeking

- System may: Direct user to appropriate emergency care messaging
- System may not: Replace emergency services / claim certainty
- Human actor: USER+EMERGENCY_SERVICES
- Verification: N/A
- Audit: SAFETY
- Sources: MI-SRC-005, MI-SRC-002

PART XVI — Safety

SAFETY_CONTROLS = 14 — first-class, not appendix.

- **MI-SAF-001** Never diagnose disease — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-002** Never replace clinicians — owner MI-SYS-001 — sources MI-SRC-002, MI-SRC-005
- **MI-SAF-003** Never prescribe medication — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-004** Never recommend medication changes/dosage — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-005** Never recommend emergency action / claim certainty — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-006** Risk informational only with evidence exposure — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-007** Human review cannot be removed — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-008** No evidence → no conclusion — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-009** Hallucination prevention / missing stays unknown — owner MI-SYS-001 — sources MI-SRC-002
- **MI-SAF-010** Sensor data never automatic diagnosis — owner MI-SYS-003 — sources MI-SRC-005

- **MI-SAF-011** Condition-guided exploration without recommendation/prescribing — owner `MI-SYS-002` — sources MI-SRC-001
- **MI-SAF-012** Emergency conditions direct to appropriate emergency care — owner `MI-SYS-003` — sources MI-SRC-005
- **MI-SAF-013** High-risk findings require safety messaging — owner `MI-SYS-003` — sources MI-SRC-005
- **MI-SAF-014** MI must not override clinician-entered information — owner `MI-SYS-001` — sources MI-SRC-005

PART XVII — Privacy / Permissions

PRIVACY_PERMISSION_CONTROLS = 8

- **MI-PRIV-001** Patient owns data / controls sharing — sources MI-SRC-002, MI-SRC-005
- **MI-PRIV-002** Consent-gated analysis; withdrawal limits future processing — sources MI-SRC-002
- **MI-PRIV-003** No hidden processing/exports — sources MI-SRC-002
- **MI-PRIV-004** Sharing explicit; consent revocable; granular permissions — sources MI-SRC-005
- **MI-PRIV-005** Lock-screen privacy masking — sources MI-SRC-005
- **MI-PRIV-006** Independent permissions per family/care/clinician relationship — sources MI-SRC-005
- **MI-PRIV-007** Zero Trust inheritance on intelligence outputs — sources MI-SRC-002
- **MI-PRIV-008** GP Passport/Consent surfaces (claimed operational) — sources MI-SRC-001

PART XVIII — Provenance / Audit

PROVENANCE_AUDIT_CONTROLS = 9

- **MI-PROV-001** Every conclusion references evidence — sources MI-SRC-002
- **MI-PROV-002** Explainability/reproducibility/auditability mandatory — sources MI-SRC-002
- **MI-PROV-003** Contract amendments require version increment + architecture review + audit trail + justification — sources MI-SRC-002
- **MI-PROV-004** Medical Data Trust Layer origin taxonomy — sources MI-SRC-005
- **MI-PROV-005** Timeline append-first; corrections create audit history — sources MI-SRC-005
- **MI-PROV-006** dm+d import provenance tracking — sources MI-SRC-006
- **MI-PROV-007** Black-box commit hash preservation identity — sources MI-SRC-004
- **MI-PROV-008** GP checkpoint git identity / APK SHA provenance — sources MI-SRC-001
- **MI-PROV-009** Audit-safe execution target for medication intelligence — sources MI-SRC-006

PART XIX — Android Operational Reality

- Implementation: `PARTIALLY_SUPPORTED`
- Runtime: `PARTIALLY_SUPPORTED`
- Device proof: `PARTIALLY_SUPPORTED`
- UI proven capabilities: **10**
- Runtime proven capabilities: **10**
- Device proven capabilities: **7**

Meaningful operational implementation exists (Doctor Workspace, medication search, condition-guided exploration, related surfaces). This is **not** 48/48 complete runtime proof.

Canonical Android GP/MI root is the Medical Journey `ElisenceAndroid` tree — not the slim nested `app/ElisenceAndroid` without GP packages.

PART XX — iOS Mirror / Operational Reality

- Mirror: `PARTIALLY_SUPPORTED`
- UI integration: `PARTIALLY_SUPPORTED`
- Runtime: `PARTIALLY_SUPPORTED`

- Device proof: **UNPROVEN**
- Source proven: **17**
- UI proven: **8**
- Runtime proven: **7**
- Device proven: **0**

MIRRORED SOURCE ≠ UI COMPLETE ≠ RUNTIME COMPLETE ≠ DEVICE PROVEN

Ongoing iOS UI work is **not** a failure of backend or Android.

PART XXI — Backend Reality

- Backend implementation: **PARTIALLY_SUPPORTED**
- Backend-proven capabilities: **10**

Local trees define MI-ALT SSP (often unmounted on main) and mount GP passport/appointments variously; prescriptions/AMPP/global-identity Python sources are largely **absent locally** and evidenced via production **phase3-gp** documentation + client contracts. Do not infer backend implementation for documentary-only capabilities.

PART XXII — Cross-Platform Parity

- Assessment: **PARTIALLY_SUPPORTED**

Android runtime/device evidence is ahead of iOS device proof. Visual parity ≠ functional parity.

PART XXIII — Tests / Pass / Seal / Device Proof

TEST_SOURCE_FOUND ≠ TEST_EXECUTED ≠ PASS ≠ SEALED ≠ DEPLOYED ≠ DEVICE_PROVEN

- TEST_FAMILIES = 7
- TEST_SOURCE_PROVEN capabilities = 7
- PASS_PROVEN capabilities = 4
- SEALED_PROVEN capabilities = 2
- DOCUMENTARY_DEVICE_PROOF_ITEMS = 4
- RECONCILED_DEVICE_PROOF_ITEMS = 6

Test families

- **MI-TEST-001** Prescription unit 18/18 — source_found=True raw_log=False pass=CLAIM_ONLY
- **MI-TEST-002** compileDebugKotlin/assembleDebug — source_found=True raw_log=False pass=CLAIM_ONLY
- **MI-TEST-003** ViewModel/SSP/Condition exploration — source_found=True raw_log=False pass=CLAIM_ONLY
- **MI-TEST-004** Samsung device proofs — source_found=False raw_log=False pass=CONFLICTED_FINAL_FAIL
- **MI-TEST-005** MJ 15250/15250 — source_found=False raw_log=False pass=CLAIM_ONLY
- **MI-TEST-006** VMP catalogue numeric — source_found=False raw_log=False pass=PRODUCTION_API_SPOTCHECK_DOCUMENTED
- **MI-TEST-007** MI Contract freeze — source_found=True raw_log=False pass=FROZEN_DOC

Device-proof items (reconciled; avoid double-count)

- **MI-DEV-001** GP/Doctor Workspace/Search/Ring / Android / Samsung R3CRB06T2BW (documentary) → **PASS_THEN_FINAL_GATE_FAIL** (2026-06-26)
- **MI-DEV-002** Android live HTTPS medication search / Android / Pixel_7 AVD emulator-5554 → **PARTIAL_UI_API_PASS** (2026-06-01)

- **MI-DEV-003** Condition-guided exploration device / Android / Samsung absent / emulator → **PENDING_OR_BLOCKED** (2026-06)
- **MI-DEV-004** L4 APK integrity / Android / Samsung absent; emulator-5554 only → **BLOCKED** (2026-06-26)
- **MI-DEV-005** Production API medication stack spot-check / Backend HTTPS / api.elisence.com workstation curl → **HTTP_200_DOCUMENTED** (2026-06-01)
- **MI-DEV-006** iOS Medical Intelligence UI / iOS / NONE_IN_CORPUS → **NO_DEVICE_PROOF** (2026-08)

Six evidence items ≠ full-system device proof.

PART XXIV — 48-Capability Golden Ledger & Operational Matrix

All **48** capabilities retained with **48/48** documentary traceability and **48/48** operational reconciliation.

Golden ledger rows

Wide register reflowed for print legibility — all 23 columns and 48 data rows preserved without omission.

Operational reality matrix (authoritative columns)

Columns: DOCUMENTARY · CODE/BACKEND · ANDROID SOURCE/UI/RUNTIME/DEVICE · IOS
SOURCE/UI/RUNTIME/DEVICE · TEST · PASS · SEAL · AUTHORITY GATE

Full machine-readable matrix: 14_MI_RECONCILED_OPERATIONAL_CENSUS_LOCK.json → maturity_matrix.

Do **not** use green/complete visual language for UNKNOWN / UNPROVEN fields.

PART XXV — ELISA / Sensor / Chart Adjacency

Relationship	Documentary	Runtime
ELISA → MI	UNKNOWN	ABSENT
SENSOR → MI	UPSTREAM_PROVIDER	upstream contract fields; MI does not own Sensor
CHART ↔ MI	PARTIAL_UNKNOWN	ABSENT_DIRECT

SENSOR PROVIDES SIGNAL / CONTEXT ≠ MEDICAL INTELLIGENCE OWNS SENSOR

Do **not** imply current direct ELISA ↔ Medical Intelligence runtime integration. Future/intended integration, if discussed historically, is not present operational proof.

PART XXVI — Conflicts

DOCUMENTARY_CONFLICTS = 7 — reconciliation 7/7

MI-C-01 — Medical Intelligence vs Medication Intelligence naming

- Original A: MI Contract governs Medical Intelligence brain
- Original B: Pharmacy doc is Medication Intelligence Execution under GP Prescriptions
- Safe historical handling: Keep distinct; do not collapse
- Reconciled disposition: **CONFIRMED**
- Note: Repo packages/contracts keep Medical Intelligence vs Medication Intelligence distinct

MI-C-02 — Filename Medical tracking vs Medical Journey Product Contract body

- Original A: Filename/metadata Medical tracking contract
- Original B: Body MJ Product Contract + Sensor contract appendix
- Safe historical handling: CROSS_SYSTEM disposition; ambiguity preserved
- Reconciled disposition: **CONFIRMED**
- Note: Ambiguous filename disposition preserved; MJ Product Contract is body authority

MI-C-03 — MI never prescribe vs roadmap prescribing intelligence language

- Original A: MI Contract: never prescribe / recommend med changes
- Original B: Pharmacy Phase10 target includes NHS-aware prescribing intelligence
- Safe historical handling: Roadmap aspirational capability ≠ authority grant; MI safety boundary remains
- Reconciled disposition: **CONFIRMED**
- Note: Safety never-prescribe remains; no authority grant found

MI-C-04 — Device proof PASS vs final DEVICE_PROOF_FAILED

- Original A: Samsung proofs listed PASS
- Original B: Final verdict NOT_READY_DEVICE_PROOF_FAILED / Samsung absent
- Safe historical handling: Treat final gate as authoritative for commit readiness
- Reconciled disposition: **CONFIRMED**
- Note: Samsung final fail + emulator partial e2e; no new Samsung pass

MI-C-05 — Black-box 15250 PASS vs no raw logs in corpus

- Original A: Stamp claims 15250/15250 PASS and PHASE7 complete
- Original B: No raw logs in this corpus
- Safe historical handling: Documentary claim only; not independent raw proof
- Reconciled disposition: **STILL_CONFLICTED**
- Note: Still no raw 15250 logs in inspected trees

MI-C-06 — Phase1 medication foundation complete vs later phases roadmap

- Original A: VMP/search foundation completed claims
- Original B: AMP/pharmacy/safety/global still roadmap
- Safe historical handling: Do not promote whole Medication Intelligence Execution to complete
- Reconciled disposition: **PARTIALLY_RESOLVED**
- Note: AMPP + global-identity pilot exist beyond pure roadmap; pharmacy/OCR/safety full stack still roadmap

MI-C-07 — GP operational claims vs NOT_READY commit gate

- Original A: GP/Prescription infrastructure largely recovered/operational claims
- Original B: Official verdict NOT_READY dirty/unsafe + missing device proof
- Safe historical handling: Operational claims ≠ releasable sealed state
- Reconciled disposition: **CONFIRMED**
- Note: Android source operational vs releasable seal still not equivalent; iOS dirty/incomplete

Original conflicts are never erased.

PART XXVII — Gaps

DOCUMENTARY_GAPS = 12 — reconciliation 12/12**MI-G-01**

- Original missing: Raw test logs / pass packs for 18/18 and 15250/15250 claims
- Why: Cannot independently verify numeric PASS
- Disposition: **STILL_OPEN**
- Note: Unit test sources found for GP; numeric 18/18 and 15250 raw logs still absent; not re-run

MI-G-02

- Original missing: Enumerated HTTP route paths for Production API / Doctor Workspace
- Why: Routes named but paths absent
- Disposition: **PARTIALLY_CLOSED**
- Note: Routes enumerated in Android/iOS clients; local Python prescriptions routers still missing

MI-G-03

- Original missing: Professional verification / credential proof protocol
- Why: Actors named; verification≠registration not operationally specified
- Disposition: **STILL_OPEN**
- Note: Professional verification protocol still incomplete; iOS authority snapshot defaults unknown

MI-G-04

- Original missing: Explicit prescribing authority grant mechanism
- Why: Safety says never prescribe; no verified-prescriber onboarding spec
- Disposition: **STILL_OPEN**
- Note: No prescribing authority grant mechanism found

MI-G-05

- Original missing: iOS parity / mirroring proof
- Why: iOS compliance required by MJ contract; only dirty-tree mention in GP checkpoint
- Disposition: **PARTIALLY_CLOSED**
- Note: iOS mirror source+LiveAPI+UI present; device parity unproven; Android ahead

MI-G-06

- Original missing: Paid/premium entitlement model
- Why: No documentary paid tier found
- Disposition: **STILL_OPEN**
- Note: No paid/premium entitlement model found

MI-G-07

- Original missing: Pharmacy authority / organisation tenancy model details
- Why: Pharmacy orchestration roadmap lacks authority verification detail
- Disposition: **STILL_OPEN**
- Note: Pharmacy still UI shell; no pharmacy authority backend found

MI-G-08

- Original missing: Repository inspection in this mission (by design)
- Why: Runtime/code proof deferred
- Disposition: **CLOSED_BY_REPOSITORY_EVIDENCE**
- Note: This mission inspected repositories by design

MI-G-09

- Original missing: ELISA explicit relationship in this corpus
- Why: Not named
- Disposition: **CLOSED_BY_REPOSITORY_EVIDENCE**
- Note: ELISA runtime integration ABSENT in inspected MI/GP surfaces

MI-G-10

- Original missing: Retention periods for timeline/intelligence/audit stores
- Why: Not documented here
- Disposition: **STILL_OPEN**
- Note: Retention periods still undocumented in inspected trees

MI-G-11

- Original missing: BNF explicit citation
- Why: NHS dm+d present; BNF not named
- Disposition: **STILL_OPEN**
- Note: BNF still not named; dm+d remains

MI-G-12

- Original missing: Chart subsystem ownership mapping
- Why: Summaries exist; Chart plane not named
- Disposition: **CLOSED_BY_REPOSITORY_EVIDENCE**
- Note: No direct MI→Chart consumer found; relationship ABSENT_DIRECT

Absence of proof ≠ proof of absence.

PART XXVIII — Claim Boundaries

SAFE TO SAY

- Medical Intelligence has a broad documentary architecture.
- 48 capabilities are documentary-traceable (48/48).
- Material Android runtime and physical-device evidence exists (partial).
- Material iOS source/UI/runtime evidence exists.

- Tiered UI access is supported.
- Backend implementation exists for a documented subset.
- Medical Tracking has a partial orchestration/consumer relationship.
- Prescription Intelligence is documentarily separate; operational separation is partial.
- Sensor is an upstream provider.
- Professional authority gating exists partially.

NOT SAFE TO SAY

- 48/48 capabilities are operational.
- 48/48 are device-proven.
- iOS Medical Intelligence is device-proven.
- Professional authority is fully fail-closed end-to-end.
- Prescription Intelligence separation is fully proven operationally.
- ELISA currently consumes Medical Intelligence runtime.
- Medical Intelligence directly owns chart runtime.
- Pharmacy runtime is complete.
- All professional functionality is available to all users.

PART XXIX — Future Verification

Recommended verification (outside this Golden mission):

1. Obtain/inspect `phase3-gp` prescriptions/AMPP/GI Python sources and mount proofs.
2. iOS device acceptance for Medical Intelligence Doctor Workspace + search.
3. End-to-end professional authority fail-closed harness (server + client).
4. Raw test logs for numeric PASS claims (18/18, 15250/15250).
5. Pharmacy authority backend if/when implemented — do not promote UI shell.
6. Explicit ELISA / Chart consumers only when code proves them.

PART XXX — Final Golden Definition

ELISENCE Medical Intelligence is a multi-actor medication/reference/workflow intelligence architecture that operates alongside distinct Prescription Intelligence, Medical Tracking, GP / Primary Care and Pharmacy authorities.

Its documentary architecture is substantially broader than the subset currently proven operational across backend, Android and iOS.

Android has meaningful runtime and physical-device proof.

iOS contains substantial mirrored source and current UI/runtime integration, but no Medical Intelligence device proof is established by the present reconciliation.

Tiered presentation is supported, while complete runtime/authority enforcement remains partial and end-to-end professional fail-closed authority remains unproven.

The system must therefore be understood simultaneously as:

- a **broad documentary architecture**, and
- a **partially proven operational implementation**.

Golden Omission Audit

GOLDEN_OMISSION_AUDIT = **PASS**

All locked documentary and operational census values preserved.
